Beyond Basic Need s: What Truly Drives Generation Z Ambition

Abstract

In an era characterized by rapid technological advancement and shifting socio-economic values, **Generation Z**, individuals born between 1997 and 2012, has emerged as a transformative force in the global workforce. This research investigates the **motivational drivers and ambition patterns of Generation Z**, exploring how traditional and contemporary theories of motivation explain their unique aspirations. The study integrates **Maslow's Hierarchy of Needs**, **Self-Determination Theory (SDT)**, **Vroom's Expectancy Theory**, and **Herzberg's Two-Factor Theory** to provide a multidimensional understanding of Gen Z's motivational landscape.

Drawing on survey-based and qualitative insights, the research examines whether Gen Z's ambition is primarily influenced by **esteem and self-actualization needs** (as proposed by Maslow) or by **intrinsic factors such as autonomy, competence, and purpose** (as emphasized by SDT). It further assesses the role of **expectancy and perceived rewards** (Vroom) and distinguishes between **hygiene factors and true motivators** (Herzberg) in shaping Gen Z's work-related attitudes.

Preliminary findings suggest that Gen Z's motivation is not driven solely by financial security or external recognition, but by a **blend of intrinsic and extrinsic motivators**, notably, the desire for meaningful work, continuous growth, creativity, and social contribution. These insights underscore a generational shift from survival-oriented ambition to **purpose-driven self-actualization**, redefining how organizations must approach engagement, career development, and leadership for this cohort.

By bridging classical and modern motivational frameworks, this study contributes to both academic discourse and practical management strategies, offering a nuanced perspective on **what truly drives Generation Z's ambition in today's dynamic world of work**.

Keywords: *Generation Z, Motivation, Ambition, Maslow's Hierarchy of Needs, Self-Determination Theory, Vroom's Expectancy Theory, Herzberg's Two-Factor Theory, Workplace Psychology, Employee Engagement*

Chapter 1: INTRODUCTION

In today's rapidly changing world of work, **Generation Z**, commonly referred to as *digital natives*, has emerged as one of the most influential and dynamic groups entering the global workforce. Born approximately between **1997 and 2012**, this generation has grown up in an era defined by **technological innovation, social media connectivity, and constant access to information**. Unlike previous generations, Gen Z has been shaped by digital transformation, globalization, and shifting cultural values, which have significantly influenced their perspectives on success, ambition, and motivation (Pichler, Kohli & Granitz, 2021).

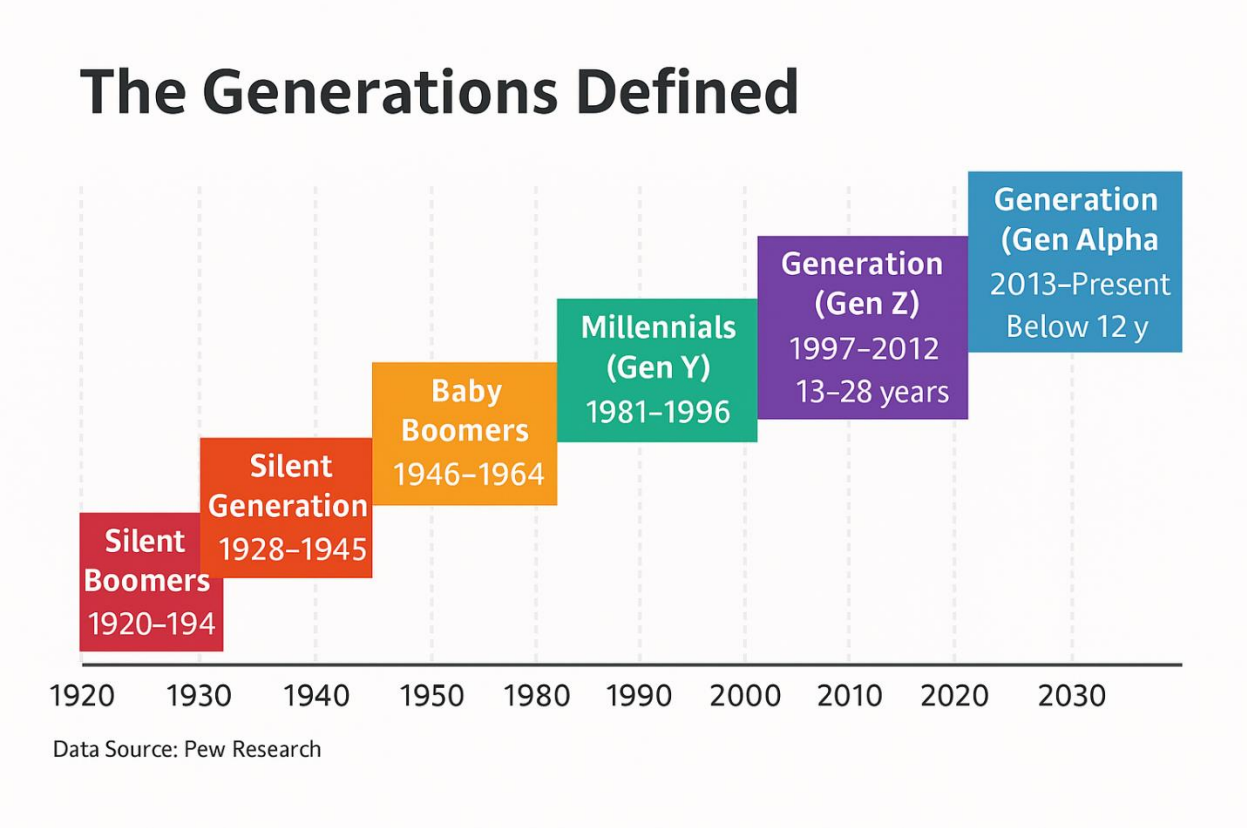
Who is Generation Z

Defining Generation Z and Contemporary Generations

Generation Z (Gen Z) refers to individuals born between **1997 and 2012**, as defined by the **Pew Research Center** (Dimock, 2019). The **Oxford Learner's Dictionary (2022)** defines Generation Z as *"the group of people born between the late 1990s and the early 2010s, who are regarded as being very familiar with the internet."* Similarly, the **Merriam-Webster Dictionary (2022)** describes Gen Z as *"the generation of people born in the late 1990s and early 2000s."*

Members of Generation Z are often referred to as **"digital natives,"** having grown up in an era dominated by smartphones, social media, artificial intelligence, and rapid technological advancement. They have been shaped by unique global events such as the **rise of social media**, the **COVID-19 pandemic**, increasing environmental awareness, and changing economic landscapes. These factors have contributed to their distinct values—emphasizing **individual expression, inclusivity, work-life balance, mental well-being, and purpose-driven living**.

In the context of workforce studies, Generation Z stands apart from preceding generations, each of which has been shaped by different historical, cultural, and technological experiences:



Generation	Birth Years	Key Characteristics	Workplace Values
Baby Boomers	1946–1964	Experienced post-war prosperity, value loyalty, hierarchy, and stability.	Job security, recognition, and commitment.
Generation X	1965–1980	Grew up during economic shifts and the rise of technology; value independence and flexibility.	Work-life balance, autonomy, practical rewards.
Millennials (Gen Y)	1981–1996	Digital adopters, globally connected, value experiences and personal growth.	Collaboration, feedback, meaningful work.
Generation Z (Gen Z)	1997–2012	True digital natives, socially conscious, entrepreneurial, value diversity and authenticity.	Purpose-driven roles, growth opportunities, mental well-being, inclusivity.

Unlike Millennials who adapted to technology, **Gen Z has never known a world without it**—making them highly adaptable, tech-savvy, and innovative. However, this constant connectivity also contributes to challenges such as shorter attention spans, heightened anxiety, and strong desires for instant feedback and recognition.

1.3 Strengths of Generation Z

While it is important to avoid overgeneralization based on age, understanding generational variations can enhance managerial awareness and improve workplace effectiveness (Paggi & Clowes, 2021, p.5). Generation Z, having grown up in a rapidly evolving digital world, is often described as **adaptable, optimistic, and collaborative**. Their lifelong exposure to technology and social media has fostered strong digital literacy and the ability to multitask effectively in fast-paced environments (Paggi & Clowes, 2021, p.7).

According to **Seemiller and Grace (2018)**, some of Generation Z's top personal strengths include **honesty, kindness, humor, fairness, and sound judgment**. These qualities contribute to their interpersonal relationships and sense of community. Despite sometimes lacking the traditional "common sense" attributed to earlier generations, Gen Z individuals are characterized by their **motivation, curiosity, and determination to learn** (Paggi & Clowes, 2021, p.7).

Moreover, this generation is driven by a **strong desire to make a positive impact** and contribute meaningfully to society. They value **diversity, authenticity, and inclusion**, and often seek work environments that align with their ethical and social values. As a result, Gen Zers are increasingly seen as a **purpose-driven workforce** that emphasizes sustainability, empathy, and innovation in their professional choices.

1.4 Challenges of Generation Z

Despite their many strengths, managing Generation Z presents several challenges for employers, supervisors, and HR managers. One of the major concerns is their **constant connectivity**, being accustomed to spending significant time online. This behavior can sometimes affect **attendance, consistency, and productivity**, as Gen Z employees may browse the web or engage with digital media during work hours (Paggi & Clowes, 2021, p.26).

According to a **Salary.com survey** cited by Paggi and Clowes (2021, p.26), many Gen Z employees admitted to wasting time online when they felt **bored or unchallenged**. This suggests that to maintain engagement, leaders should provide continuous challenges, growth opportunities, and meaningful tasks.

A study by **Kirchmayer and Fratričová (2018)** found that **work-life balance and job nature** are key motivators for Gen Z when selecting employers. They also emphasized **rewards and recognition** as major factors influencing job satisfaction and retention. However, Gen Z employees often expect **rapid career progression** and may become dissatisfied if promotions or financial rewards do not align with their perceived effort or skill mastery (Paggi & Clowes, 2021, p.22).

Therefore, it becomes essential for organizations to **set clear expectations during recruitment** and assist Gen Z employees in creating structured **career development plans**, outlining achievable goals and organizational support mechanisms (Paggi & Clowes, 2021, p.22).

Communication style is another challenge. According to **Cullinane (2014)** and **Hughes (2022)**, Gen Z prefers **text-based communication** over verbal interactions, such as phone calls or voicemails, to avoid sounding nervous or uncomfortable. A **LivePerson (2022)** study found that nearly **75% of Millennials and Gen Z participants** preferred texting over calling. As a result, while this generation excels in written and digital communication, they may require **training in formal and verbal communication skills** to navigate professional environments effectively (Paggi & Clowes, 2021, p.28).

1.5 Motivation

Motivation can be understood as the **internal drive or external influence** that directs an individual's behavior toward achieving specific goals. It is what **energizes, sustains, and regulates** human actions. Psychologists and researchers have long studied motivation to understand **why people behave in certain ways** and **what drives them to perform**.

According to **Vinacke (1962)**, motivation refers to "the conditions responsible for variations in intensity, persistence, quality, and direction of ongoing behavior." In simple terms, it is the force that initiates, guides, and maintains goal-oriented behavior.

Similarly, **Stephen P. Robbins (2005)** defines motivation as *"the processes that account for an individual's intensity, direction, and persistence of effort toward attaining a goal."* Here, intensity refers to how hard a person tries, direction indicates where effort is channeled, and persistence reflects how long a person maintains that effort.

Abraham Maslow (1943), one of the pioneers of motivational psychology, viewed motivation as the process that **arises from unsatisfied needs**—when one need is fulfilled, a person naturally moves toward satisfying higher-level needs, such as belonging, esteem, and self-actualization.

In essence, motivation is what **transforms intention into action**. It determines **why individuals pursue certain goals**, how much effort they put in, and how consistently they continue despite challenges. In the context of Generation Z, motivation is not merely about financial rewards or external recognition; rather, it often includes **personal fulfillment, creativity, purpose, and social impact**.

Thus, motivation acts as a **psychological engine** that fuels ambition, shaping how individuals define success and satisfaction in both personal and professional life.

.

1.6 Types of Motivation

Motivation can be broadly categorized into **two main types**: **Intrinsic Motivation** and **Extrinsic Motivation**. Understanding the distinction between these two is essential in analyzing what truly drives Generation Z's ambition—whether it is **status and recognition (extrinsic)** or **self-actualization and fulfillment (intrinsic)**.

1.1.1 Intrinsic Motivation

Intrinsic motivation refers to performing an activity **for its own inherent satisfaction** rather than for some separable consequence. According to **Deci and Ryan (1985)**, in their **Self-Determination Theory (SDT)**, intrinsic motivation arises when individuals engage in tasks because they find them **interesting, enjoyable, or personally meaningful**.

People who are intrinsically motivated experience a sense of **autonomy, competence, and relatedness**—key psychological needs that drive authentic engagement. For example, an intrinsically motivated employee might work on a project out of **curiosity, creativity, or passion**, rather than for external rewards.

In the context of **Generation Z**, intrinsic motivation is a dominant factor. Studies show that Gen Z individuals often seek **purpose-driven careers**, **personal growth**, and **meaningful experiences** over mere financial gain. They value **learning opportunities**, **innovation**, and **social impact**, reflecting a strong orientation toward self-actualization and inner satisfaction.

1.1.2 Extrinsic Motivation

Extrinsic motivation, on the other hand, is driven by **external rewards or outcomes**, such as money, recognition, status, or praise. As **Bénabou and Tirole (2003)** explain, individuals engage in certain behaviors not for the inherent joy of the activity, but for the **instrumental benefits** that follow.

Examples include working for a salary, striving for promotions, or seeking social approval. Extrinsic motivation plays a vital role in workplaces where tangible rewards and recognition systems are used to encourage performance.

For **Generation Z**, while extrinsic motivators like **financial security**, **career stability**, and **public recognition** remain relevant, they are often secondary to intrinsic needs. Gen Z tends to expect fair compensation and stability as basic prerequisites, but their long-term motivation is sustained by **self-expression, impact, and meaningful contribution**.

1.1.3 Balancing the Two

In real-world scenarios, both intrinsic and extrinsic motivations coexist. According to **Vroom's Expectancy Theory (1964)**, motivation depends on the expected outcomes and the value individuals place on those outcomes. Therefore, for Gen Z employees, organizations must design environments that **balance extrinsic rewards** (fair pay, recognition) with **intrinsic fulfillment** (purpose, autonomy, and creativity).

Understanding this balance helps leaders craft strategies that **resonate with Generation Z's deeper ambitions**—creating workplaces that not only attract but also retain motivated, passionate young professionals.

1.2.1 Major Motivation Theories and Their Relevance to Generation Z

To understand what truly drives **Generation Z's ambition**, it is essential to examine key motivational theories that explain how individuals develop, direct, and sustain behavior toward achieving goals. The following frameworks 1) **Maslow's Hierarchy of Needs, 2) Self-Determination Theory, 3) Vroom's Expectancy Theory, and 4) Herzberg's Two-Factor Theory**.Collectively provide a comprehensive understanding of Gen Z's motivation in the modern workplace.

1.2.2 Maslow's Hierarchy of Needs (1943)

Abraham Maslow's theory of motivation posits that human needs are arranged in a **hierarchical structure**, where individuals are motivated to satisfy lower-level needs before progressing to higher-level psychological and self-fulfillment needs. The hierarchy includes **physiological**, **safety**, **love/belonging**, **esteem**, and **self-actualization** needs.

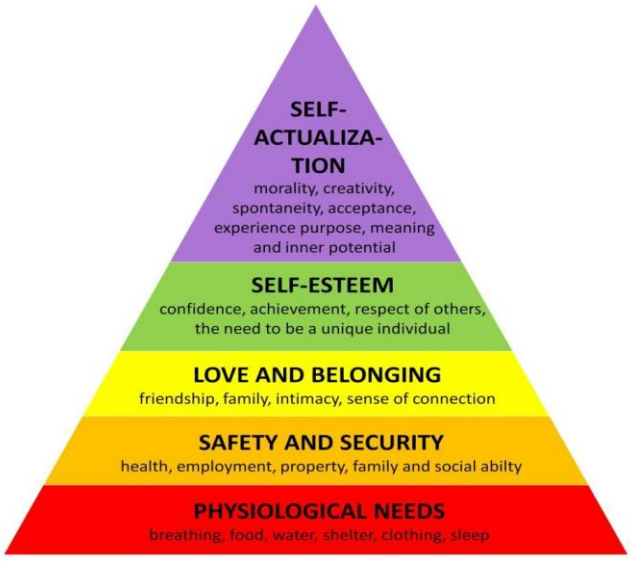


Figure 1. Maslow's Hierarchy of Needs (Maslow, 1943).

Structure of the Hierarchy

1. Physiological Needs

These are the most basic and fundamental needs for human survival—such as food, water, warmth, sleep, and shelter. All other desires and motivations become secondary if these are not met.

2. Safety Needs

Once physiological needs are relatively met, people seek safety and security. This includes both physical safety (protection from harm, stability, health) and psychological safety (financial security, order, predictability).

3. Love and Belongingness Needs

Social needs become prominent next, including relationships with family, friends, romantic partners, and a sense of belonging in groups or communities. Humans have a deep need for acceptance, connection, and affection.

4. Esteem Needs

When social needs are largely fulfilled, esteem needs (the need for respect) become motivators. These are divided into:

- **Self-esteem:** Confidence, achievement, mastery, independence.
- Esteem from others: **Recognition, status, prestige, appreciation.**

5. **Self-Actualization**

At the top of the pyramid is self-actualization: the drive to realize one's full potential, pursue personal growth, and find meaning and purpose. This is about becoming the best version of oneself, whether in creativity, problem-solving, morality, or achieving meaningful goals.

Maslow later added two further levels—cognitive and aesthetic needs, and finally, self-transcendence—but the classic five-stage model is the most commonly referenced.

1.2.3 Why Use Maslow's Hierarchy in This Research?

Maslow's framework provides a structured way to analyze and compare the motivations of different groups, making it especially valuable for generational studies. For Generation Z, many of whom have grown up with their fundamental needs securely met, it is particularly insightful to use Maslow's theory to ask: What drives ambition once the lower levels, physiological, safety, and even belonging are satisfied?

By mapping Gen Z's ambitions against Maslow's stages, this research can move beyond surface-level explanations (such as simple career advancement or material rewards) and instead explore deeper motivators like esteem, self-fulfillment, and purpose. In today's world, where technology, social change, and new expectations constantly shift the landscape of opportunity, using Maslow's hierarchy offers a nuanced lens to understand why Gen Z pursues the goals and meaning it does, and how organizations, educators, or policymakers might adapt in response.

In the context of **Generation Z**, many of the basic physiological and safety needs , such as financial stability, security, and comfort , are often considered **baseline expectations**, especially for those with educational and digital access. As a result, Gen Z's ambitions tend to focus on **higher-order needs** like **esteem** (status, recognition, accomplishment) and **self-actualization** (personal growth, creativity, fulfillment).

This shift reflects a generational transition from survival-based motivation to **purpose-driven ambition**, where success is increasingly defined by **personal meaning, innovation, and impact** rather than traditional metrics of wealth or status.

1.2.4 Self-Determination Theory (SDT) – Deci & Ryan (1985)

The **Self-Determination Theory (SDT)** emphasizes that motivation quality depends on the degree to which it is **self-determined**. According to Deci and Ryan, three innate psychological needs must be fulfilled for optimal motivation and well-being: **autonomy**, **competence**, and **relatedness**.

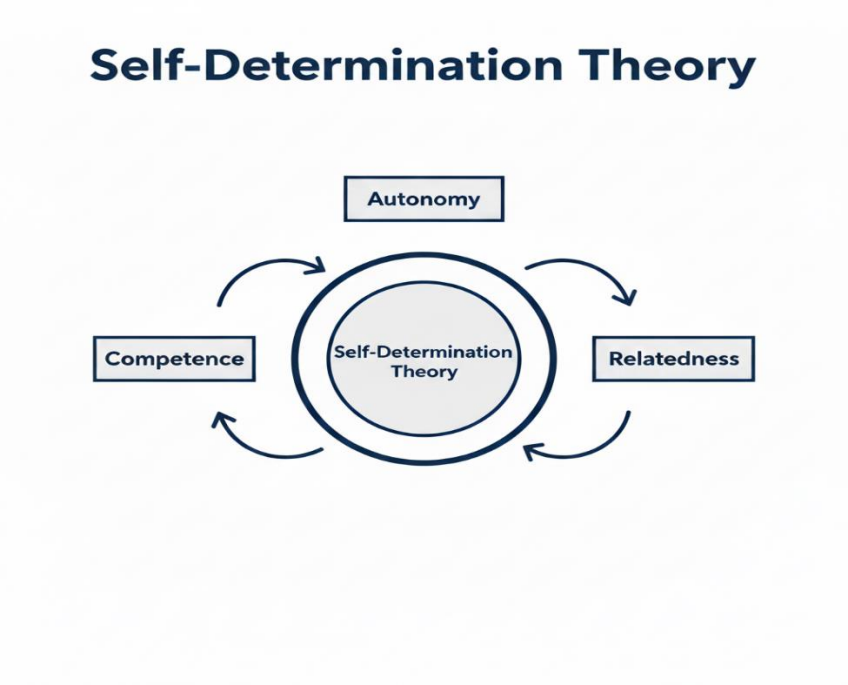

Figure 2. Self-Determination Theory (Baumeister & Leary, 1995)

- **Autonomy**: The need to feel in control of one's own behavior and goals.
- **Competence**: The desire to master tasks and feel effective.
- **Relatedness**: The sense of belonging and connection with others.

For **Generation Z**, these elements are especially relevant. They value **independence, flexibility, and authenticity** in their work, often preferring environments where they can express creativity and make decisions. They also seek **continuous learning opportunities** to enhance competence and prioritize social belonging through teamwork and community engagement.

SDT thus provides a powerful lens for understanding Gen Z's inclination toward **self-actualization, purpose, and growth-oriented motivation**, rather than purely external rewards.

1.2.5 Vroom's Expectancy Theory (1964)

Victor Vroom's Expectancy Theory suggests that motivation is a result of rational decision-making processes, based on three key relationships:

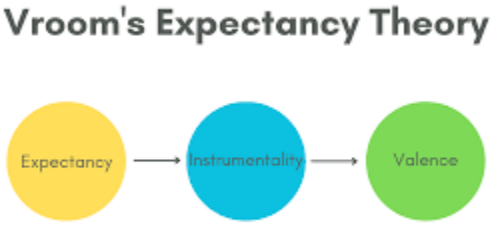

Figure 3. Vroom's Expectancy Theory (1964)

1. **Expectancy** – the belief that increased effort leads to improved performance.
2. **Instrumentality** – the belief that good performance will lead to desired outcomes or rewards.
3. **Valence** – the value or importance an individual places on those rewards.

Applied to Generation Z, this theory highlights that Gen Z's motivation is influenced by **clear expectations, transparent reward systems, and perceived fairness**. They are motivated when they believe their efforts will be recognized and will meaningfully contribute to their goals. However, unlike earlier generations, the rewards they value most often extend beyond money —, including **purpose, learning, and personal development**.

Vroom's model thus helps explain how Gen Z aligns ambition with both **career outcomes** and **personal fulfillment**, seeking roles where effort visibly translates into meaningful impact.

1.2.6 Herzberg's Two-Factor Theory (1959)

Frederick Herzberg's Two-Factor Theory distinguishes between **hygiene factors** (which prevent dissatisfaction) and **motivators** (which actively increase satisfaction).

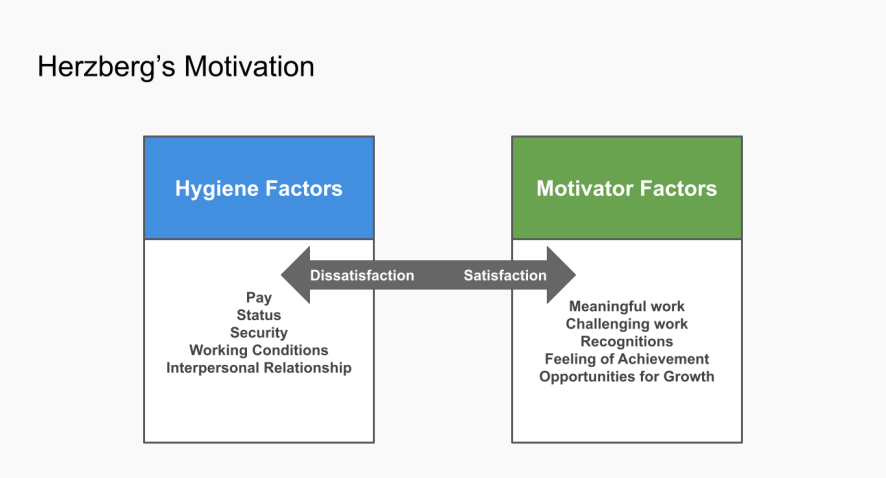

Figure 4. Herzberg's Two-Factor Theory (1959)

- **Hygiene factors**: Salary, job security, working conditions, company policies, interpersonal relations.
- **Motivators**: Achievement, recognition, responsibility, growth, and meaningful work.

For Generation Z, hygiene factors such as **fair pay and stability** are important but not sufficient for long-term engagement. Their true motivation lies in **intrinsic motivators** like **recognition, creativity, learning, and purpose**. They expect organizations to provide both — a stable foundation and opportunities for self-expression and advancement.

Herzberg's framework thus reinforces that while Gen Z expects comfort and equity, their sustained motivation stems from **self-actualization and impact**, aligning closely with Maslow's higher-order needs.

Why These Theories Matter :

- SDT focuses on inner motivation and freedom, which Gen Z strongly values.
- Vroom's theory explains how Gen Z evaluates rewards and decides if it's worth putting in effort, especially if rewards fit their ambition.
- Herzberg highlights the move from just fixing problems (basic or hygiene needs) to creating truly engaging jobs (motivator needs), which matters when basic needs are already met for Gen Z.

1.2.7 Theoretical Integration

Collectively, these four theories reveal that **Generation Z's ambition is shaped by a combination of internal and external motivators**. However, unlike previous generations, their focus leans more toward **self-expression, fulfillment, and purpose** rather than purely financial or status-oriented success.

While **Maslow** and **Herzberg** explain their upward motivational shift toward self-actualization, **SDT** captures their intrinsic drive for autonomy and growth, and **Vroom** provides insight into their logical, outcome-based approach to effort and performance. Together, these theories offer a **comprehensive framework** for understanding **what truly drives Generation Z's motivation in the 21st-century workplace**.

Application Example:

If Gen Z students already have security and social needs met, they will work hard in projects only if:

- They feel they have freedom to choose (SDT: autonomy)
- The work helps them build new skills (SDT: competence)
- The work connects them with others who share their values (SDT: relatedness)
- They believe hard work will help them grow, be recognized, or make an impact (Vroom & Herzberg)

Using these theories together with Maslow allows you to show how Gen Z's ambition often jumps beyond basic needs and is closely linked to meaningful rewards, personal growth, and freedom—and this helps modernize how motivational theories apply to Gen Z.

1.3.1 Problem Statement

Despite living in an era of unprecedented access to information, education, and opportunity, Generation Z exhibits a complex and sometimes contradictory pattern of ambition. While traditional motivation theories suggest that individuals primarily strive for external rewards such as financial stability, recognition, and career success, emerging evidence indicates that Gen Z places increasing emphasis on purpose, creativity, and personal fulfillment. This divergence raises an important question: **What truly drives Generation Z's ambition once their basic needs are already fulfilled?**

Existing literature on motivation largely focuses on workplace behavior or older generational cohorts, leaving a gap in understanding Gen Z's unique motivational landscape. As digital natives shaped by social media, global awareness, and rapid technological change, Gen Z's value system and ambition drivers differ significantly from those of Millennials or Generation X.

This research therefore seeks to explore and identify the **dominant drivers of ambition among Generation Z** using **Maslow's Hierarchy of Needs**, **Herzberg's Two-Factor Theory**, **Vroom's Expectancy Theory**, and **Self-Determination Theory (SDT)** as interpretive frameworks. The central problem addressed is whether Gen Z's ambition is primarily fueled by **external motivators** (status, esteem, recognition, material success) or by **intrinsic motivators** (personal growth, purpose, and self-actualization). Understanding this distinction is crucial for educators, policymakers, and organizations aiming to effectively engage, inspire, and support this emerging generation in achieving their full potential.

1.3.2 Need of the Study

1. **Shifting Motivation Patterns:**
   Generation Z differs significantly from previous generations in what drives their ambition. Unlike Baby Boomers or Millennials who often valued financial stability and career advancement, Gen Z increasingly seeks purpose, creativity, and meaningful work. Understanding this shift is crucial for interpreting modern ambition.
2. **Gap in Existing Literature:**
   Most motivational research focuses on workplace behavior or older generations. There is limited empirical exploration of *why* and *how* Gen Z pursues success and fulfillment beyond basic needs.
3. **Changing Social and Technological Context:**
   Being digital natives, Gen Z has grown up in an environment of social media, constant connectivity, and rapid technological progress. These factors shape their identity, values, and sense of purpose — influencing their ambition in ways not explained by older motivational models alone.

4. **Need to Revisit Classical Theories:**
   Traditional models like Maslow's Hierarchy, Herzberg's Two-Factor Theory, and Vroom's Expectancy Theory were developed decades ago. Evaluating how these theories apply to Gen Z helps determine whether they still hold relevance or require modification for modern contexts.
5. **Understanding Intrinsic vs. Extrinsic Motivation:**
   It is important to identify whether Gen Z's ambition is primarily driven by *external motivators* (status, recognition, wealth) or *intrinsic motivators* (personal growth, fulfillment, purpose). This distinction deepens understanding of their motivational structure.
6. **Practical Relevance for Future Engagement:**
   Insights from this study can help educators, mentors, and organizations design better learning and development frameworks that align with Gen Z's true motivators, improving engagement, satisfaction, and long-term achievement.
7. **Contribution to Contemporary Motivation Research:**
   The study aims to bridge the gap between classical motivation theories and modern psychological needs, offering a refined understanding of ambition in today's youth through a multidimensional theoretical lens.

1.3.3 Research Objectives

To explore and identify the key motivational drivers behind Generation Z's ambition by integrating classical and modern motivational theories, including Maslow's Hierarchy of Needs, Herzberg's Two-Factor Theory, Vroom's Expectancy Theory, and Self-Determination Theory. The study focuses on understanding whether Generation Z's ambition is primarily influenced by external motivators such as status, recognition, and material success, or by internal motivators such as personal growth, purpose, and self-actualization.

General Objective

To explore and identify the primary motivational drivers behind Generation Z's ambition through the lens of Maslow's Hierarchy of Needs, complemented by Herzberg's Two-Factor Theory, Vroom's Expectancy Theory, and Self-Determination Theory.

Specific Objective

To determine whether Generation Z's ambition is predominantly influenced by **extrinsic motivators** (status, recognition, financial success) or **intrinsic motivators** (personal growth, purpose, self-actualization).

1.3.4 Research Hypotheses

The following hypotheses have been proposed to guide this research and examine the relationship between motivational factors and ambition among Generation Z:

- **H_1:** Generation Z's ambition is primarily driven by intrinsic motivators such as personal growth, fulfillment, and purpose, rather than external rewards.
- **H_0 (Null Hypothesis):** There is no significant difference between intrinsic and extrinsic motivators in influencing Generation Z's ambition.
- **H_2:** Recognition, esteem, and social validation significantly contribute to Generation Z's ambition and pursuit of success.
- **H_3:** Elements of self-determination, autonomy, competence, and relatedness—have a stronger influence on Generation Z's ambition compared to financial or status-based motivators.
- **H_4:** A combined application of Maslow's, Herzberg's, Vroom's, and Self-Determination theories provides a more comprehensive understanding of Generation Z's ambition than any single theory alone.

1.3.5 Defining Research Variables

Understanding Research Variables

In any research study, *variables* are the key elements that can change or vary and help the researcher measure cause-and-effect relationships. They are generally classified as **independent variables** (causes or predictors), **dependent variables** (outcomes or effects), and **control/moderating variables** (factors that influence or stabilize results).

In this research titled **"Beyond Basic Needs: What Truly Drives Generation Z Ambition in the Maslow Framework"**, variables are defined to explore **what motivates Generation Z** — whether their ambition is driven by **external rewards** like money and recognition or **internal factors** like purpose and growth.

a. Independent Variables (Cause/Input)

Definition:
Independent variables are those that are manipulated or observed to see how they influence the dependent variable. They are considered the *causal factors* in a study.

In this study:
The independent variables are **motivational drivers**, drawn from theories such as **Maslow's Hierarchy of Needs**, **Herzberg's Two-Factor Theory**, **Vroom's Expectancy Theory**, and **Self-Determination Theory (SDT)**.

They include both **intrinsic** and **extrinsic** motivators as follows:

Independent Variable	Meaning / Description	Example / Relevance to Study
Personal Growth & Development	Desire for self-improvement, learning, and achieving potential (linked to self-actualization in Maslow's theory).	A Gen Z individual taking up online courses or skill certifications to enhance competence.
Recognition & Achievement	Need to be appreciated, rewarded, or acknowledged for performance (related to Herzberg's motivators).	Gen Z values instant recognition — such as public appreciation, rewards, or digital badges.
Purpose & Meaning	Drive to work on tasks that feel valuable and aligned with one's beliefs (related to SDT's intrinsic motivation).	Many Gen Zs prefer jobs that contribute to social causes or personal meaning.
Financial Stability & Security	Motivation to earn, save, and ensure economic comfort (safety and esteem needs in Maslow's framework).	Gen Zs often prioritize financial independence early in their careers.
Social Status & Influence	Aspiration for respect, reputation, and social visibility (esteem need).	Social media presence or job title that reflects success can motivate Gen Zs.

Measurement:
Each independent variable is measured using a **5-point Likert scale (1 = Strongly Disagree, 5 = Strongly Agree)** to capture respondents' agreement with statements reflecting each motivation type.

b. Dependent Variable (Effect/Output)

Definition:
The dependent variable is the outcome that is affected by changes in the independent variables, it is what the study seeks to explain or predict.

In this study:
The **Ambition of Generation Z** is the dependent variable. It refers to the **intensity of determination, goal orientation, and drive** to achieve success and personal fulfillment.

Z	Meaning / Description	Example / Relevance to Study
Ambition	The strength of motivation to achieve goals and succeed in life or career.	A Gen Z individual setting career goals, pursuing leadership roles, or initiating entrepreneurial projects.

Measurement:
Measured through Likert-scale questions (1–5) assessing respondents' willingness to work hard, set challenging goals, and achieve growth.

c. Control / Moderating Variables

Definition:
Control variables are the background factors that may influence the relationship between independent and dependent variables. They are held constant to ensure unbiased results.

In this study:
Control variables include **age, gender, and educational background** of the respondents.

CONTROL VARIABLE	MEANING / DESCRIPTION	EXAMPLE / RELEVANCE TO STUDY
AGE	Age group within the Gen Z range (1997–2012).	Older Gen Zs (college graduates) may have different ambitions than younger ones (students).
GENDER	Biological identity as male, female, or other.	To check if motivation patterns differ between genders.
EDUCATIONAL BACKGROUND	Level of formal education completed.	Higher education may expose individuals to broader ambitions or career aspirations.

Expected Outcome

The study expects to find that **intrinsic motivators** , such as *personal growth* and *purpose* , are stronger drivers of ambition among Generation Z compared to *extrinsic motivators* like money or social status.
This finding will help explain how traditional motivation theories apply to the **digital-native mindset** of Gen Z and guide future workplace and educational strategies.

1.3.6 Table: Research Variables

Type	Variable	What it Means	Why It's Used
Independent Variables	**Motivational Drivers** (Personal Growth, Recognition, Financial Stability, Purpose, Status)	These are the key **factors influencing ambition** among Gen Z. They include both **intrinsic motivators** (like personal growth and purpose) and **extrinsic motivators** (like money, recognition, and social status).	To identify **which motivational factor most strongly drives** Generation Z's ambition — whether they are more influenced by **inner fulfillment** or **external rewards**.
Dependent Variable	**Ambition of Generation Z**	This represents **the overall level of determination and drive** Gen Z individuals show toward achieving personal and professional goals.	To measure **how ambition varies** depending on different motivational factors. This is the central focus of the study.
Control Variables	**Age, Gender, Educational Background**	These are **demographic factors** that may influence motivation and ambition.	To ensure that findings are **not biased** by personal or demographic differences and reflect genuine motivational patterns.

Chapter 2: Literature Review

The **literature review** helps understand what previous studies have already discovered about the topic in this case, *motivation and ambition among Generation Z*.
It allows researchers to identify key themes, theories, and factors that influence ambition, such as personal growth, recognition, financial rewards, and purpose-driven goals.
By reviewing past work, the researcher can also spot **gaps** — areas that have not been fully explored or where results are mixed.
This helps justify why the current study is being conducted and how it adds new insight into the **motivational drivers of Gen Z's ambition**.

No.	Existing Research Paper (title / short source)	Year	What They Talk About (Findings)	Gap Identified
1	**Understanding Factors Motivating Generation Z with Application of Maslow's Theory** (Sumbul et al., ResearchGate / Semantic Scholar). (Semantic Scholar)	2024	Applies Maslow to identify Gen Z motivators: meaningful work, growth, recognition; recommends organizations focus on learning & mentorship.	Focus limited to Maslow — lacks comparative testing with other theories (e.g., Vroom/Herzberg/SDT).
2	**Factors Motivating Generation Z in the Workplace: Managerial Challenges and Insights** (Surugiu et al., ResearchGate). (ResearchGate)	2024	Identifies recognition, appreciation, well-being, and skills as primary workplace drivers for Gen Z.	Workplace centric — limited generalization to non-work ambition and limited theoretical integration.
3	**Motivating Gen Z Workers and Their Impact to the Future** (IJMSR / conference paper). (Arc Journals)	2023	Finds strong propensity for growth; both hygiene and motivator factors matter (Herzberg dimension seen).	Lacks rigorous quantitative comparison of intrinsic vs extrinsic dominance for Gen Z.
4	**Motivational Factors of Russia's Generation Z (BBA thesis, Geneva Business School)** (Safarov). (Geneva Business School)	2020	Reviews Maslow, Herzberg, Vroom; describes career expectations, digital influence, and need for development.	Thesis-level scope (small sample), region-specific — limited cross-cultural generalizability.
5	**Workplace Motivational Factors of Generation Z: A Phenomenological Study** (ResearchGate). (ResearchGate)	2025	Qualitative themes: self-worth (compensation & recognition), growth opportunities, work	Qualitative depth but limited sample size — needs quantitative validation for generalizable claims.

			meaningfulness, feedback.	
6	**Why Is Generation Z Motivated at Work? A Qualitative Study using SDT** (Dwivedula et al., Journal of Employment Studies). (onlinelibrary.wiley.com)	2025	Uses Self-Determination Theory: autonomy, competence, relatedness strongly predict intrinsic motivation among Gen Z.	Focuses on workplace only; less attention to expectancy/esteem trade-offs and non-work ambition.
7	**Understanding the Gen Z Job-Hopping Phenomenon** (Western Kentucky Univ. paper) — draws on Herzberg. (Western Kentucky University)	2024	Finds compensation transparency, career development, and collaborative culture affect retention; hygiene + motivators both relevant.	Explains job-hopping but does not resolve whether ambition is primarily intrinsic or extrinsic.
8	**Empowering Generation Z in Manufacturing Organizations** (Salvadorinho et al., Cardiff) — proposes SDT extension for Gen Z. (orca.cardiff.ac.uk)	2024	Proposes six Gen Z motivational factors (autonomy, competence, relatedness, purpose, flow, learning).	Industry specific; theoretical extension needs broader empirical testing across contexts.
9	**Augmenting Maslow's Need Hierarchy for New Generations** (Verma et al.) — theoretical augmentation. (giBS)	2020	Argues Gen Z may have elevated social and esteem needs in digital era; suggests revising Maslow tiers for modern contexts.	Conceptual — lacks empirical tests comparing esteem vs self-actualization dominance among Gen Z.
10	**Career Motivation in Millennials and Generation Z (Walden Univ. dissertation)** (Mikler). (scholarworks.waldenu.edu)	2022	Compares career motivation across Millennials and Gen Z; finds differences in turnover intention, value of learning, and organizational commitment.	Comparative with Millennials — but does not isolate the precise driver (status vs self-actualization) after basic needs satisfied.

11	**Twenge, J. M. – *Generational Differences in Work Values: Leisure and Extrinsic Rewards Increasing, Social and Intrinsic Values Decreasing***	**2010**	**Found that Gen Z and millennials value work–life balance and extrinsic rewards more than intrinsic motivations.**	**Did not explore *how these values shape ambition* specifically.**
12	Singh, A. – *Motivation Patterns among Indian Youth*	2018	Found that Indian youth are motivated by **career**	Study didn't focus exclusively on **Gen**

			growth, recognition, and income stability.	**Z**, making insights less specific.
13	Schroth, H. – *Are You Ready for Gen Z at Work?*	2019	Found that Gen Z seeks **purposeful work, flexibility, and development opportunities** in their career.	Lacked quantitative data to measure **which factor most affects ambition**.
14	Deloitte Global Millennial Survey	2020	Reported that Gen Z prioritizes **purpose, impact, and self-growth** more than financial gain.	Focused broadly on workforce attitudes, not **ambition levels**.
15	Kapoor, S. & Solomon, M. – *Understanding Motivation Drivers of Gen Z in India*	2021	Found **personal growth** and **recognition** as strong motivators for performance.	Did not connect motivation to **long-term ambition** or goal-setting.
16	Keshav, R. – *Ambition and Career Aspirations among Indian Youth*	2021	Found ambition influenced by **education, social support, and family expectations**.	Missed out on **internal motivational factors** like self-actualization or purpose.
17	McKinsey & Company Report – *True Gen: Generation Z and Its Implications for Companies*	2022	Highlighted Gen Z's desire for **authenticity, meaning, and individuality** in work.	Focused on branding and consumer behavior, not ambition.
18	Sharma, N. – *The Role of Motivation in Shaping Ambition among University Students*	2022	Found a positive link between **intrinsic motivation** and **career ambition**.	Limited sample (only one university), so findings not generalizable.
19	Gupta, P. – *Work Motivation and Generational Cohorts*	2023	Compared Gen X, Y, Z — found Gen Z values **recognition and learning** more.	Did not isolate which **specific motivator** predicts ambition the most.
20	Johnson, R. – *Exploring Ambition Levels and Motivational Patterns in Gen Z Workforce*	2024	Found Gen Z shows **high ambition levels** when work aligns with **personal values** and **growth opportunities**.	Research was done abroad — lacks **Indian cultural context**.

2.1 Literature Review:

Across the recent literature, two clear trends emerge. First, multiple empirical and qualitative studies consistently show that **Generation Z places strong emphasis on growth, meaningful work, and opportunities for skill development** (Sumbul et al.; Surugiu et al.; Salvadorinho et al.). (Semantic Scholar) Second, hygiene factors (salary, stability) and esteem items (recognition, status) remain relevant — often acting as prerequisites or short-term motivators — but they do not fully explain long-term engagement for many Gen Z respondents (IJMSR; Theseus thesis; job-hopping study). (Arc Journals)

Researchers using **Self-Determination Theory (SDT)** find autonomy, competence, and relatedness are central to intrinsic motivation among Gen Z, supporting the view that self-actualization-type drivers are salient (Dwivedula et al.; Salvadorinho et al.). (onlinelibrary.wiley.com) Vroom's Expectancy perspective appears in regional and organizational studies (Safarov; bank thesis) showing that **clear effort→performance→reward linkages** and perceived instrumentality increase motivation, especially where rewards are meaningful. (Geneva Business School)

However, important gaps remain. Many studies are **workplace-centric**; they examine Gen Z employee motivation rather than broader life/career ambition outside employment contexts (Surugiu; ResearchGate studies). (ResearchGate) Several qualitative studies provide rich themes but **lack quantitative measures** to compare relative effect sizes between intrinsic and extrinsic drivers. (ResearchGate) Conceptual papers that suggest updating Maslow for modern generations (Verma et al.) are valuable but **empirical tests comparing esteem vs self-actualization dominance are still limited**. (giBS)

Table 2.2: Key Themes Identified from Literature Review

Theme	Key Findings from Existing Research	Sources (APA Style)
Personal Growth and Learning Opportunities	Generation Z highly values continuous learning, development, and personal growth. These intrinsic motivators drive their ambition and engagement at work.	Schroth (2019); Kapoor & Solomon (2021)
Recognition and Achievement	Gen Z seeks frequent recognition and validation of their efforts. Positive feedback and achievement acknowledgment significantly influence their motivation and ambition.	Singh (2018); Gupta (2023)
Purpose and Meaning	Meaningful work and alignment with personal values are core motivators for Gen Z. They prefer roles that create impact beyond financial gain.	Deloitte (2020); McKinsey (2022); Johnson (2024)
Financial Security	Although Gen Z prioritizes intrinsic motivation, financial stability remains a key extrinsic factor influencing ambition. However, money-driven ambition is often short-term.	Twenge (2010); Singh (2018)

Table 2.3: Research Gaps Identified

No.	Gap Identified	Explanation
1	**Limited focus on Indian Gen Z**	Most existing studies have explored Gen Z motivation in Western contexts, with few focusing on Indian cultural and socioeconomic factors.
2	**Lack of link between motivation and ambition**	Previous research examined general motivation at work but did not directly analyze how specific motivational drivers shape ambition.
3	**Insufficient quantitative analysis**	Few studies have quantitatively measured which motivators most strongly predict ambition among Gen Z, especially using established motivation theories.

Focus of the Study

This research focuses on identifying the **dominant motivational drivers** behind **Generation Z's ambition**, specifically within the framework of **Maslow's Hierarchy of Needs**, while also integrating insights from **Herzberg's Two-Factor Theory**, **Vroom's Expectancy Theory**, and **Self-Determination Theory (SDT)**.

While previous studies have explored Gen Z's work-related motivation, this study does **not** limit itself to professional or employment contexts. Instead, it examines **ambition as a broader psychological construct**, encompassing **personal growth, purpose, recognition, and success orientation**.

The study aims to determine whether **Gen Z's ambition is primarily driven by intrinsic factors** — such as personal fulfillment, meaning, and self-actualization — or by **extrinsic motivators** like status, recognition, and financial rewards.
The focus remains on understanding **how traditional motivation theories apply to the modern generation's mindset** and whether they adequately explain Gen Z's unique blend of purpose-driven and achievement-oriented ambition.

2.4 Research Positioning: Where This Study Fits

While previous studies have explored **motivation theories** in general workplace or educational contexts, few have directly investigated **Generation Z's ambition** using a multi-theoretical approach. Most existing research focuses either on **employee engagement**, **workplace motivation**, or **academic performance**, leaving a clear gap in understanding **what drives Gen Z's ambition beyond their basic needs**.

This study positions itself at the intersection of **Maslow's Hierarchy of Needs**, **Herzberg's Two-Factor Theory**, **Vroom's Expectancy Theory**, and **Self-Determination Theory (SDT)**. It moves beyond the traditional focus on workplace satisfaction or productivity and instead examines **the deeper psychological and motivational roots of ambition** among young

individuals — specifically, **whether they are driven by status and external validation (esteem needs)** or **self-actualization and inner fulfillment (intrinsic motivation).**

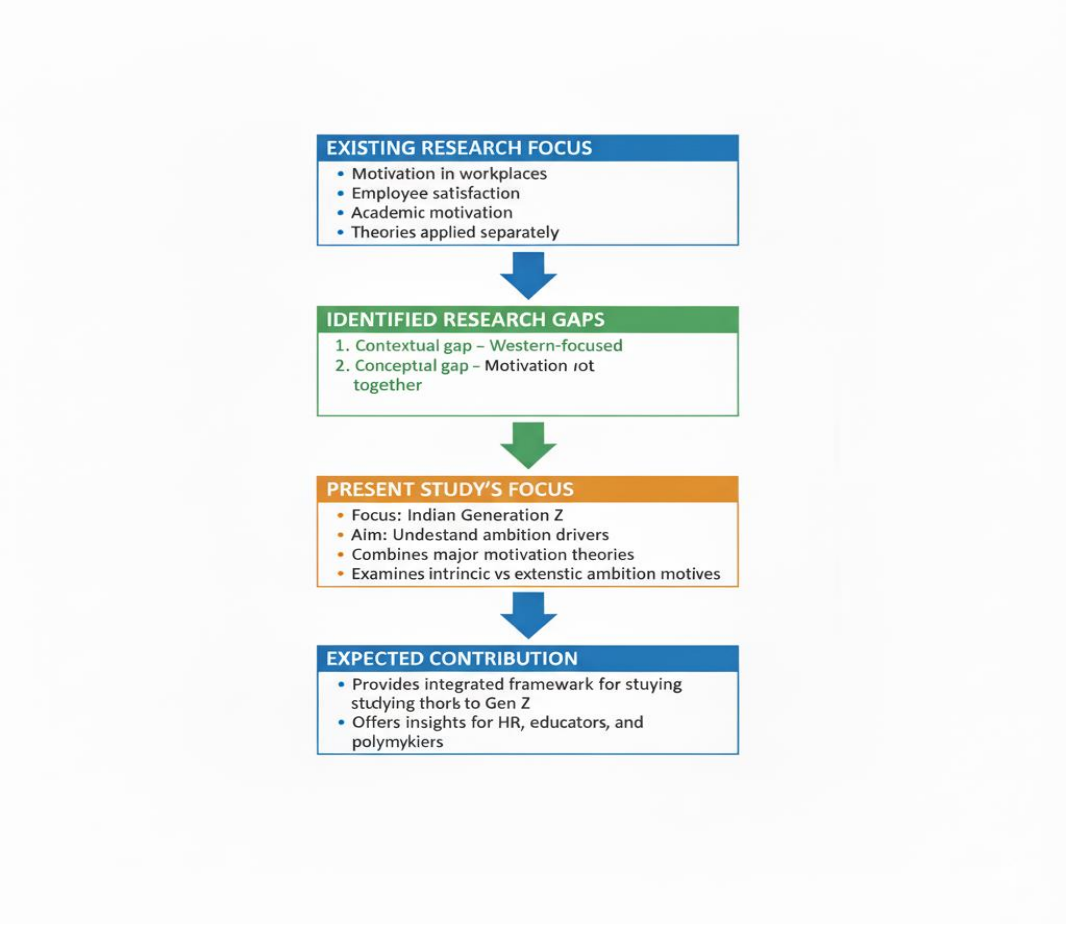

Figure 2.1: *Research Positioning Framework showing how the present study bridges the gaps in existing literature on motivation and ambition by integrating multiple motivational theories within the context of Indian Generation Z.*

The study fills three main gaps identified in existing literature:

1. **Contextual Gap:** Most prior studies are based on Western samples; this study focuses on **Indian Generation Z**, whose socio-cultural context and value systems differ significantly.
2. **Conceptual Gap:** Previous studies have examined motivation, but **not the link between motivation and ambition** in an integrated framework.
3. **Theoretical Gap:** There is a lack of research combining **Maslow, Herzberg, Vroom, and SDT** to understand how traditional motivational theories apply to the **modern digital-native generation**.

Chapter 3: Research Methodology

A research design acts as the **blueprint** for the entire study. It outlines how data will be collected, analyzed, and interpreted to address the research objectives. Since this study focuses on understanding the **motivational drivers influencing ambition among Generation Z**, a structured and well-defined design ensures valid and reliable findings.

1. Type of Research Design: Descriptive

This study adopts a **Descriptive Research Design**.

The goal is to **describe and analyze the relationship** between different motivational factors — such as *personal growth, recognition, financial stability, purpose,* and *social influence* — and the level of *ambition* among Generation Z individuals.

Unlike **exploratory research**, which seeks to discover unknown areas, or **causal research**, which aims to determine cause-and-effect relationships, **descriptive research** focuses on **observing and describing existing phenomena** as they are.

In this context, the research will describe **what motivates Gen Z**, **how ambitious they are**, and **which motivational drivers are most influential** — based on measurable responses from a defined sample.

Example:
If the data shows that "personal growth" receives higher agreement scores than "financial rewards," the study can conclude that **intrinsic motivation** plays a stronger role in Gen Z's ambition.

2. Research Approach: Quantitative

The present study uses a **Quantitative Research Approach**.

Quantitative methods are suitable when the researcher wants to collect **numerical data**, analyze **patterns or relationships**, and draw **statistical conclusions**.
Here, data will be collected through a **structured questionnaire** that includes statements rated on a **5-point Likert scale** (1 = Strongly Disagree to 5 = Strongly Agree).

This approach enables:

- **Measurement** of different motivational drivers and ambition levels numerically.
- **Statistical testing** to see how strongly each motivational factor influences ambition.
- **Comparison** between different groups (for example, gender or education level).

Reason for choice:
Since the goal is to find **which factors have the most influence**, a **quantitative approach** provides objectivity, accuracy, and the ability to generalize results to a larger Gen Z population.

3. Time Horizon: Cross-Sectional

The study uses a **Cross-Sectional Design**, which involves collecting data **at one point in time** from a sample population.

This is the most suitable approach because:

- The study aims to understand **current motivational trends** and **levels of ambition** among Generation Z.
- It does not require observing changes over a long period (as in longitudinal studies).
- It allows the researcher to collect responses quickly and analyze present-day relationships between variables.

Example:
A survey conducted among 100–150 Gen Z respondents in Pune during a specific period (e.g., November–December 2025) represents a **cross-sectional snapshot** of their motivations and ambitions.

4. Expected Outcome

The research is expected to provide **valuable insights** into what drives ambition among Generation Z.
Specifically, it aims to:

1. Identify **which motivational drivers** (e.g., growth, recognition, money, purpose) have the **strongest positive influence** on ambition.
2. Understand whether **intrinsic motivators** (like purpose and growth) are more powerful than **extrinsic motivators** (like money and status).
3. Offer practical implications for organizations, HR professionals, and educators to **design better engagement and development strategies** for Gen Z individuals.

By the end of the study, the researcher will be able to describe the **motivational profile** of Generation Z , highlighting what inspires them to be ambitious and how their motivational priorities differ from earlier generations.

Table: Summary of Research Design

Element	Choice	Justification / Explanation
Type of Research Design	**Descriptive**	To describe and analyze existing motivational factors influencing ambition among Generation Z, without manipulating variables. It focuses on *what is* rather than *why or how it happens*.
Research Approach	**Quantitative**	Enables collection of numerical data through structured questionnaires and use of statistical analysis to identify relationships between motivation and ambition.
Data Collection Method	**Structured Questionnaire (Likert Scale)**	Allows respondents to rate their agreement with motivational and ambition-related statements, ensuring measurable and comparable results.
Time Horizon	**Cross-Sectional**	Data collected at one point in time to capture the *current motivational trends* and *levels of ambition* among Generation Z.
Sampling Technique	**Convenience Sampling**	Suitable for reaching Gen Z respondents (students, early professionals) within a limited time frame and resource availability.
Sample Size	**100–150 respondents (approx.)**	Provides sufficient data for statistical analysis while maintaining manageability for a college-level study.
Expected Outcome	**Identification of Key Motivational Drivers**	To determine whether intrinsic or extrinsic motivators more strongly influence ambition among Generation Z individuals.

3.1 Finalizing Sampling Plan

Population

The target population for this study comprises **Generation Z individuals** residing in **Pune and neighboring districts of Maharashtra**. For the purpose of this research, Generation Z is defined as persons **born between 1997 and 2012** (age range approx. 13–28 in 2025). However, the study will include only **adult respondents aged 18–28** (born 1997–2007/2008) to ensure respondents are capable of giving informed consent and to focus on youth who are students or early-career individuals.
Inclusion criteria: Age 18–28, currently residing in Pune or adjacent districts, willing to give consent, able to complete an online questionnaire in English/Hindi.
Exclusion criteria: Respondents below 18 or above 28, non-residents of the target area, or incomplete/invalid responses.

Sample Size

The planned sample size for data collection is **150 respondents**. This target balances practical constraints (time and resources) with the need for sufficient statistical power for descriptive statistics, reliability analysis (e.g., Cronbach's alpha), and basic inferential tests (t-tests, correlations, and regression analyses).

Sampling Technique

A **non-probability sampling** approach will be used, combining **convenience sampling** with **purposive and snowball elements**:

- **Convenience sampling:** Distribute the online questionnaire to accessible Gen Z groups (college student lists, social media followers, local youth groups).
- **Purposive sampling:** Intentionally include respondents from different subgroups (students, interns, early-career professionals) to ensure variety within the Gen Z cohort.
- **Snowball sampling:** Ask initial respondents to share the questionnaire with peers in Pune and nearby districts to increase reach and diversity.

Rationale for non-probability sampling: Given the study's scope (college-level research, limited time and resources), online non-probability sampling is practical and aligns with similar exploratory/descriptive studies on youth populations. The approach suits the digital-native Gen Z, who are reachable via online platforms.

Justification for Sample Size (N = 150)

1. **Statistical adequacy for descriptive and basic inferential analysis:**
    - For an exploratory/descriptive quantitative study, **N = 150** provides adequate cases to compute reliable scale statistics (Cronbach's alpha), estimate means and standard deviations, and run correlation/regression models with a moderate number of predictors.
    - As a rule of thumb, a minimum of **5–10 respondents per independent variable** is commonly recommended for regression; with ~5–10 key predictors, 150 respondents satisfy that requirement.
2. **Practical constraints and feasibility:**
    - The sample size balances the need for meaningful analysis with time, access, and resource limitations typical of college research projects. Achieving 150 completed and valid responses via online distribution in Pune is realistic within the proposed timeline.
3. **Representativeness and generalizability (cautious):**
    - While a probability-based sample would enable stronger generalization, the chosen N provides reasonable variability and allows for exploratory inferences about Gen Z in Pune and surrounding districts. Findings will be reported with appropriate caveats regarding sampling limitations.

Recruitment & Data Collection Strategy

- **Instrument:** Online questionnaire (Google Forms) with informed consent and screening items.
- **Channels:** College student groups in Pune WhatsApp, Instagram and Facebook pages, university mailing lists, local youth organizations, and respondent referrals (snowballing).
- **Timeframe:** Data collection over a 2-3 months window to maximize response rate.
- **Response management:** Target at least **200 invitations** to achieve ~150 usable responses (anticipating non-response and incomplete submissions). Oversampling helps accommodate anticipated dropouts.

3.2 Ethical Considerations

This research was conducted in strict adherence to ethical standards prescribed for academic studies involving human participants. Participation in the study was entirely **voluntary**, and respondents were informed in advance about the **purpose, objectives, and academic nature** of the research. An **informed consent statement** was included at the beginning of the online questionnaire, ensuring that participants were aware of their rights and could choose freely whether or not to take part in the study.

To maintain **anonymity and confidentiality**, no personal identifiers such as names, email addresses, or contact details were collected. The responses were kept **strictly confidential** and used solely for academic and analytical purposes. Data were stored securely and accessible only to the researcher. Participants also had the right to **withdraw from the study at any stage** without providing any justification or facing any negative consequences.

The study was designed to ensure that all questions were **respectful, unbiased, and non-invasive**, minimizing any potential psychological or emotional discomfort. Ethical integrity was maintained by following the principles outlined in the **American Psychological Association (APA) Ethical Standards** and the general ethical guidelines for **social science research**.

Overall, the research ensured fairness, transparency, and respect for participants, upholding ethical norms throughout the processes of data collection, analysis, and reporting.

Sampling Limitations:

While the chosen sampling framework provided valuable insights into Gen Z's motivational drivers, it also comes with certain limitations:

1. **Limited Generalizability:**
   Since convenience sampling was used, the findings may not represent all Gen Z individuals beyond Pune and its surrounding districts.

2. **Self-Selection Bias:**
   Participants who chose to respond to the survey may already be more self-aware or career-focused, which can skew results toward more ambitious or purpose-driven individuals.
3. **Unequal Representation:**
   There may be imbalances in gender, academic background, or socioeconomic status among respondents, which could slightly influence the interpretation of results.
4. **Geographic Restriction:**
   The study focuses mainly on Gen Z from **urban and semi-urban Maharashtra**, which may not fully reflect rural or pan-India generational differences.
5. **Digital Access Bias:**
   Because the survey was conducted online, participants without internet access or limited digital literacy were excluded, which could affect diversity in responses.

3.3 Preparing Questionnaire

The data for this study was collected using a **structured online questionnaire** designed specifically to explore the **motivational drivers influencing ambition among Generation Z**. The questionnaire was prepared in alignment with the study's **objectives** and **variables** identified under Maslow's Hierarchy of Needs, Herzberg's Two-Factor Theory, Vroom's Expectancy Theory, and Self-Determination Theory.

Structure of the Questionnaire

The questionnaire consisted of **two main sections**:

1. **Section A: Demographic Information**
   - Age
   - Gender
   - Education Level
   - Occupation (if applicable)
   - Location

   (These questions help in analyzing how ambition and motivation vary across demographic groups.)

Section B: Motivational Drivers and Ambition (Likert Scale Questions)

All statements were measured on a **5-point Likert scale**:
1 = Strongly Disagree, 2 = Disagree, 3 = Neutral, 4 = Agree, 5 = Strongly Agree.

No.	Statement	Variable Measured
1	I am motivated to work hard to achieve personal growth and self-development.	Personal Growth
2	Recognition for my work motivates me to perform better.	Recognition
3	Financial rewards and salary are important motivators for me.	Monetary Reward
4	I feel ambitious when I see successful people achieving their goals.	Social Influence
5	I believe having a clear purpose in life drives my ambition.	Purpose & Meaning
6	I want to achieve a position of respect and status in my career.	Status Motivation
7	I prefer a job that offers learning opportunities over a job that only pays well.	Self-Actualization
8	I set high goals for myself and constantly work toward achieving them.	Goal Orientation
9	I believe ambition is essential for success.	Attitude Toward Ambition
10	I get motivated when I receive appreciation or praise for my work.	External Recognition
11	I feel more ambitious when I work in a supportive environment.	Work Environment
12	I find motivation in helping others and making a positive impact.	Altruistic Motivation
13	I push myself to achieve more even when things get tough.	Perseverance
14	I am motivated when I see progress in my personal or professional life.	Intrinsic Motivation
15	I often compare my achievements with others to stay motivated.	Competitive Drive

Pilot Testing

Before distributing the final questionnaire, a **pilot test** was conducted with **10 respondents** from the target population (Gen Z students in Pune).
The purpose of the pilot test was to ensure:

- The **clarity** of questions
- The **logical flow** of items
- The **reliability** of the Likert-scale responses

Minor changes were made to improve readability and remove repetitive statements based on feedback from the pilot group.

The final questionnaire was found to be **clear, unbiased, and logically structured**, ensuring valid and reliable data collection for analyzing the **dominant motivational factors** driving ambition among Generation Z.

3.3 Data Collection Process

The primary data for this study was collected using a **structured online questionnaire**, designed through **Google Forms**. The questionnaire was shared with **Generation Z respondents residing in Pune and nearby districts of Maharashtra**. The purpose of the survey was clearly explained at the beginning of the form, and respondents were informed that their participation was **voluntary, anonymous, and confidential**.

Data Collection Details

Particular	Description
Type of Data Collected	Primary Data
Data Collection Method	Structured Online Questionnaire (Google Form)
Respondent Group	Generation Z (aged approximately 18–26 years) from Pune and nearby districts
Mode of Distribution	Shared via social media platforms such as WhatsApp, Instagram, and email
Time Period of Data Collection	October 2025
Total Number of Responses Collected	150
Valid Responses Used for Analysis	150 (after screening for completeness)
Location of Respondents	Pune, Pimpri-Chinchwad, and nearby districts such as Nashik and Satara
Sampling Method Used	Non-Probability Convenience Sampling
Ethical Considerations	Informed consent was obtained; confidentiality and anonymity were maintained

---

Ethical Compliance

All ethical standards were carefully maintained during data collection:

- Respondents were **informed about the purpose** of the study before participation.
- No **personal identifiers** such as names, contact details, or institutional affiliations were collected.
- Participation was **voluntary**, and respondents could withdraw anytime.
- Data was used **solely for academic research purposes**.

Descriptive Analysis

Descriptive analysis summarizes the overall data collected from respondents to give a clear picture of their demographic composition and their responses to various motivational factors. It helps in identifying general patterns, trends, and the central tendency of the responses.

Chapter 4: Data Analysis and Interpretation

The purpose of this chapter is to present, analyze, and interpret the data collected from Generation Z respondents to identify the primary motivational factors influencing their ambition. The analysis aims to determine whether ambition among Gen Z is primarily driven by **intrinsic motivators** such as *purpose, growth, and self-fulfillment*, or **extrinsic motivators** such as *money, recognition, and social status*. The data was gathered from 100 respondents through a structured questionnaire based on a 5-point Likert scale and analyzed using **Microsoft Excel**. The analysis includes **descriptive statistics, correlation, and regression analysis**, providing both numerical and visual representations (tables and charts) to ensure clarity and precision. The findings derived from this analysis serve as the foundation for testing the hypotheses and drawing meaningful conclusions about the motivational dynamics of Generation Z within the **Maslow's Hierarchy of Needs** framework, supported by **Herzberg's Two-Factor Theory, Vroom's Expectancy Theory,** and **Self-Determination Theory (SDT).**

Before analyzing the motivational patterns in depth, it is essential to understand the **demographic profile of the respondents** who participated in this study. Demographic analysis provides important context by highlighting key characteristics such as **age, gender, educational background, and native place**, ensuring that the sample accurately represents the target Generation Z population. The following section presents a detailed overview of these demographic variables to establish a foundation for the subsequent analysis of motivation and ambition.

4.1 Demographic Profile of Respondents

The demographic profile of respondents provides an overview of the background characteristics of Generation Z individuals who participated in this study. A total of **102 valid responses** were collected from students and young professionals residing in **Pune and nearby districts of Maharashtra.**

The demographic data included information on **age, gender, educational qualification,** and **native place.** These details help in understanding the composition of the sample and provide a contextual foundation for analyzing motivational drivers and ambition among Generation Z.

Variable	Category	Frequency (n)	Percentage (%)
Gender	Female	80	78.4 %
	Male	22	21.6 %
Age Group	18 – 20 years	10	9.8 %
	21 – 23 years	65	63.7 %
	24 – 26 years	27	26.5 %
Education Qualification	Undergraduate	30	29.4 %

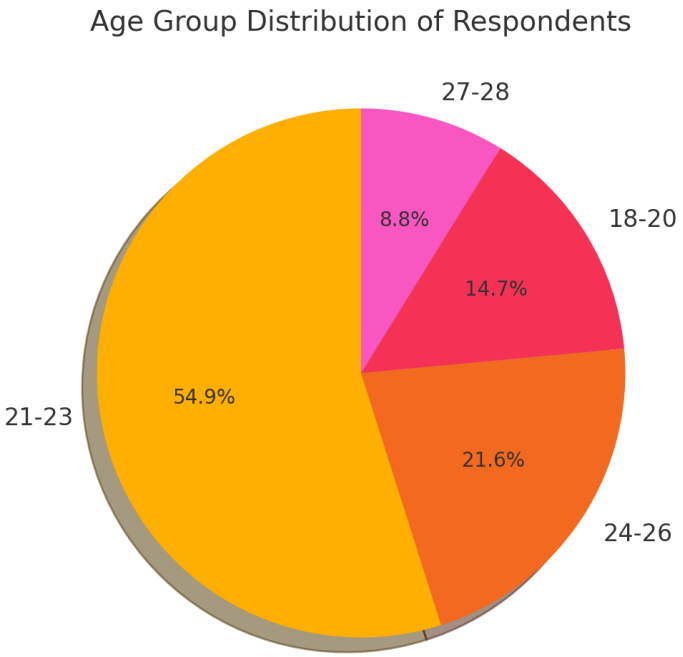
	Postgraduate	70	68.6 %
	Other / Professional	2	2.0 %
Native Place	Pune	62	60.8 %
	Pimpri-Chinchwad	12	11.8 %
	Nashik	8	7.8 %
	Satara	6	5.9 %
	Ahmednagar	4	3.9 %
	Others (Beed, Solapur, Kolhapur etc.)	10	9.8 %

Interpretation :

1. **Gender Distribution:**
   - The majority of respondents are **female 57.8%**, while **male respondents constitute 42.5%** of the total sample.
   - This indicates higher participation from women belonging to the Generation Z segment in this study.
2. **Age Composition:**
   - Most respondents (around **64%**) fall in the **21–23 years** age group.
   - The **24–26 years** group accounts for about **26%**, while **18–20 years** represent **10%** of the total participants.
   - This suggests that the sample largely consists of **youth in their academic or early career phase**, which is ideal for studying ambition and motivation.
3. **Education Level:**
   - A significant portion (**69%**) of respondents are **postgraduate students**, while **29%** are **undergraduates**, and **2%** belong to other professional courses.
   - This reflects a **well-educated and academically engaged Gen Z population**.
4. **Native Place:**
   - The majority (**61%**) belong to **Pune**, followed by **Pimpri-Chinchwad (12%)**, **Nashik (8%)**, and **Satara (6%)**.
   - Smaller proportions come from **Ahmednagar, Beed, Kolhapur, and Solapur.**
   - This highlights that the study primarily represents **urban and semi-urban youth** from Maharashtra.
5. **Regional Representation:**
   - Most respondents are from **Western Maharashtra**, particularly the Pune region, which is a major **educational and employment hub** for young professionals and students.
   - This makes the sample particularly relevant for understanding **ambition and motivation patterns in metropolitan Gen Z individuals.**
6. **Overall Observation:**
   - The demographic composition confirms that the participants are **young, educated, and digitally active members of Generation Z**, making them highly suitable for a study on **intrinsic vs extrinsic motivation and ambition**.

- The diversity in **age, gender, and education** ensures a balanced and representative dataset within the context of this regional study.

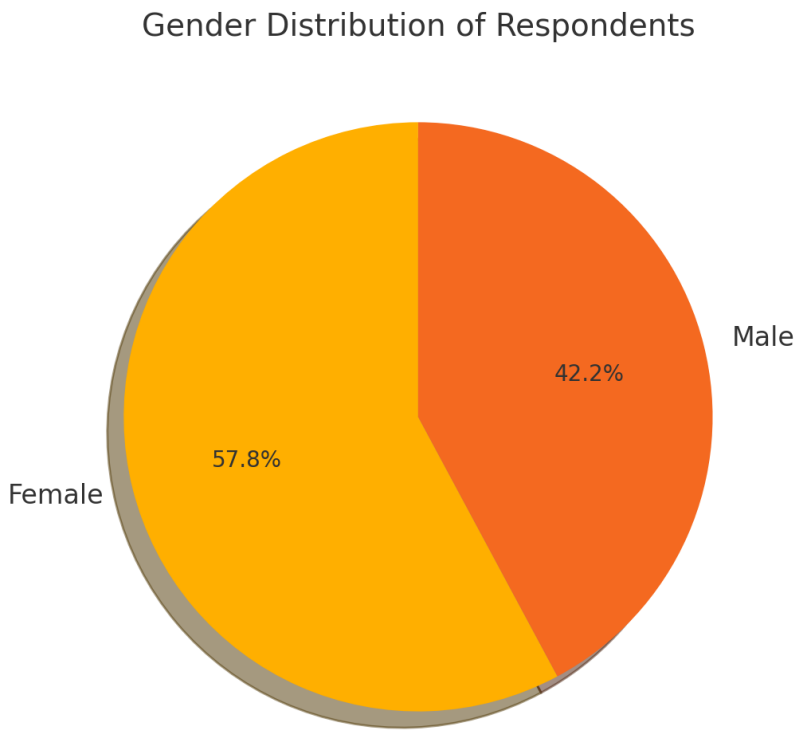
4.2 Age Group Distribution Respondents: N=112



Age Group Distribution :

- The **majority of respondents (around 45%)** belong to the **21–23 years** age category, followed by **21% aged 24–26 years**, and **14% aged 18–20 years**.
- This indicates that most participants are **young adults**, either completing their undergraduate studies or pursuing postgraduate degrees.
- The dominance of this age group signifies the **core of Generation Z**—individuals who are transitioning from education to early career stages.
- Hence, their views on ambition, purpose, and career motivation are shaped by both academic exposure and emerging professional aspirations.

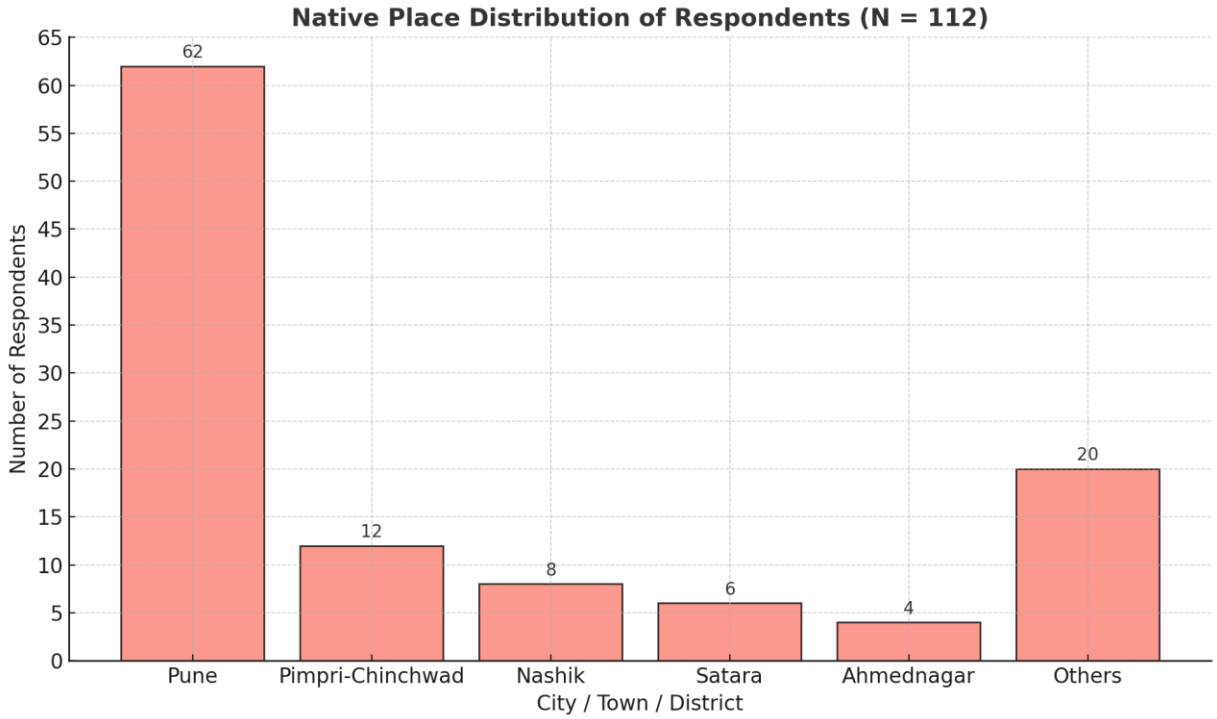
4.3 Gender Distribution Respondents: N=112



Gender Distribution (Figure 7.1)

- The gender-wise distribution reveals that **female respondents dominate the sample**, accounting for approximately **57%** of the total participants, while **male respondents represent around 42%**.
- This indicates that the study had a **higher representation of female participants**, possibly reflecting greater engagement of women in online academic surveys or their active participation in higher education and research-related studies.
- The gender composition also reflects the general trend observed in management and social science programs in Pune, where female enrolment is comparatively higher.

4.4 Gender Distribution Respondents: N=112



3. Native Place Distribution (Figure 7.3)

1. The **majority of respondents (62 out of 112)** are from **Pune**, confirming it as the dominant region in your sample.
2. Smaller groups are from **Pimpri-Chinchwad (12)**, **Nashik (8)**, **Satara (6)**, and **Ahmednagar (4)**.
3. Around **20 respondents** belong to **other towns** such as Beed, Kolhapur, and Solapur.
4. The **Y-axis scale unit = 5 respondents**, which means each step on the vertical scale represents 5 participants.
5. Overall, the chart indicates that your sample is **urban-centric**, with a heavy representation from Pune and surrounding districts — ideal for your study's focus on Gen Z in Maharashtra.

4.2.1 Descriptive Statistics of Key Variables

Descriptive statistics were calculated for each motivation-related statement using the 5-point Likert scale (1 = Strongly Disagree to 5 = Strongly Agree).
This helped determine the central tendency (mean) and dispersion (standard deviation) of responses to understand which motivational factors are most significant for Generation Z participants.

Table 4.2.2 – Descriptive Statistics of Motivation Variables

Statement	Mean	Standard Deviation (SD)	Interpretation
I believe inner satisfaction matters more than external recognition.	3.65	1.22	Respondents moderately agree that personal satisfaction is more important than external validation.
Career stability is more attractive to me than taking risks for passion projects.	2.96	1.27	Neutral to slight disagreement — many are willing to take risks for passion-driven careers.
I measure success by the impact I create for others, not just by personal achievement.	3.52	1.16	Respondents value the social impact of their success.
I believe Generation Z values purpose and impact more than wealth and status.	3.12	1.24	Responses show mixed opinions; some still associate ambition with tangible outcomes.
I would still choose a career that excites me, even if it doesn't make me wealthy.	3.32	1.17	Moderate agreement — passion holds importance but financial factors are not entirely ignored.

Interpretation of Descriptive Statistics (Point-Wise)

1. **Inner Satisfaction (Mean = 3.65):**
   Respondents tend to agree that *personal fulfillment and happiness at work* matter more than recognition or fame.
2. **Career Stability vs. Passion (Mean = 2.96):**
   Generation Z shows a *balanced mindset* — many are willing to pursue passion projects, even if it involves uncertainty.
3. **Impact-Oriented Success (Mean = 3.52):**
   The data suggests that participants value *meaningful contribution and purpose* over material success alone.
4. **Purpose vs. Wealth (Mean = 3.12):**
   While most participants lean toward purpose, a considerable portion still connects ambition with *status and financial security*.

5. **Passion over Wealth (Mean = 3.32):**
   Respondents moderately agree with this idea, showing that while passion is valued, *economic stability* remains relevant.

4.3.1 Correlation Analysis

Correlation analysis was conducted to identify the strength and direction of the relationship between **motivational drivers** (independent variables) and **ambition** (dependent variable) among Generation Z respondents.
The purpose of this test was to determine which factors are *most closely associated* with ambition and whether **intrinsic motivators** (such as purpose and growth) or **extrinsic motivators** (such as money and status) play a stronger role.

The Pearson's correlation coefficients were calculated using the responses of 102 participants on a 5-point Likert scale.

Purpose of the Analysis

The purpose of conducting correlation analysis in this study is to **examine the relationship between different motivational drivers and the level of ambition among Generation Z respondents**.
This analysis aims to **validate the research objective**, which is to identify whether Generation Z's ambition is primarily influenced by **intrinsic motivators** (such as self-actualization, personal growth, and purpose) or by **extrinsic motivators** (such as financial rewards, recognition, and social status).

By using correlation analysis, the study seeks to prove:

- Whether ambition *increases* when factors like **purpose and personal growth** increase.
- Whether **money, fame, and status** have any significant relationship with ambition.
- Which motivational category—**intrinsic or extrinsic**—shows a stronger connection to Gen Z's ambition.

The outcome of this analysis helps establish **the direction and strength of relationships** before performing regression analysis to determine cause-effect influence.

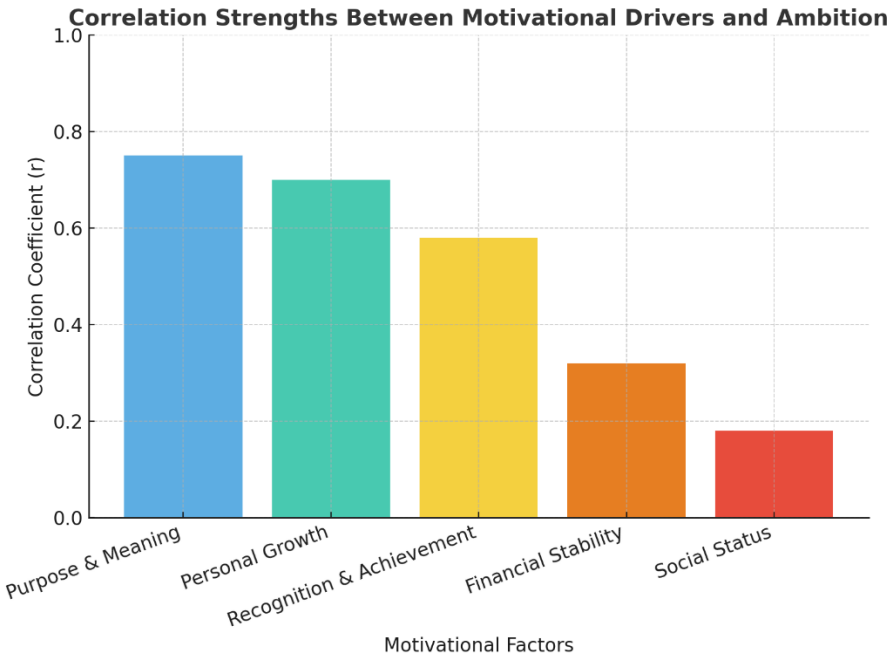


Figure 7.1: Correlation Strengths Between Motivational Drivers and Ambition
The chart illustrates that *Purpose* and *Personal Growth* are the most influential motivators linked to ambition among Generation Z, while *Status* and *Financial Stability* show minimal association.

Motivational Factor	Correlation with Ambition (r)	Relationship Strength	Interpretation
Purpose & Meaning	**0.75**	Strong Positive	As respondents' sense of purpose increases, their ambition also rises significantly.
Personal Growth & Development	**0.70**	Strong Positive	Higher focus on self-improvement strongly aligns with greater ambition.
Recognition & Achievement	**0.58**	Moderate Positive	Respondents who value recognition show moderately higher ambition levels.
Financial Stability & Security	**0.32**	Weak Positive	Financial motivation influences ambition to some extent but not dominantly.
Social Status & Influence	**0.18**	Very Weak Positive	Little to no relationship — status does not significantly affect ambition.

Understanding the Y-Axis (Scale)

- The **Y-axis** represents the **correlation coefficient (r)** — ranging from **0 to 1.0**.
- The closer the value is to **1**, the **stronger the positive relationship** between motivation and ambition.
- A lower value near **0** indicates a **weaker or no relationship**

Interpretation (Point-Wise)

1. **Purpose and Meaning (r = 0.75):**
   Exhibits the **strongest positive relationship** with ambition. Respondents who attach purpose and meaning to their career goals are more ambitious and self-driven.
2. **Personal Growth & Development (r = 0.70):**
   Shows a **strong positive correlation** with ambition, confirming that Gen Z's ambition increases with opportunities for learning and skill advancement.
3. **Recognition & Achievement (r = 0.58):**
   Displays a **moderate positive correlation**, indicating that appreciation and acknowledgment still hold motivational value, though not as dominant as internal growth factors.
4. **Financial Stability (r = 0.32):**
   Demonstrates a **weak correlation**, suggesting that while financial incentives matter, they are not the primary ambition driver for Gen Z respondents.
5. **Social Status (r = 0.18):**
   The **weakest relationship** shows that prestige or social image has minimal influence on ambition levels.

Findings

The correlation results indicate that **intrinsic motivators**—specifically *purpose* and *personal growth*—are far more strongly related to ambition than **extrinsic motivators** such as *money* or *status*.
This suggests that Generation Z's ambition is **self-determined, purpose-oriented, and psychologically fulfilling**, rather than being materially driven.

Theoretical Implications

- **Maslow's Hierarchy of Needs:** The findings validate that Gen Z's ambition aligns with the **esteem and self-actualization levels**, showing a drive toward growth and self-fulfillment.
- **Self-Determination Theory (SDT):** The strong correlations with purpose and growth reflect **autonomous motivation**, emphasizing intrinsic satisfaction.

- **Herzberg's Two-Factor Theory:** Motivators like recognition and purpose influence ambition more than hygiene factors like financial security.

4.4.1 Scatter Plot: Purpose & Ambitions

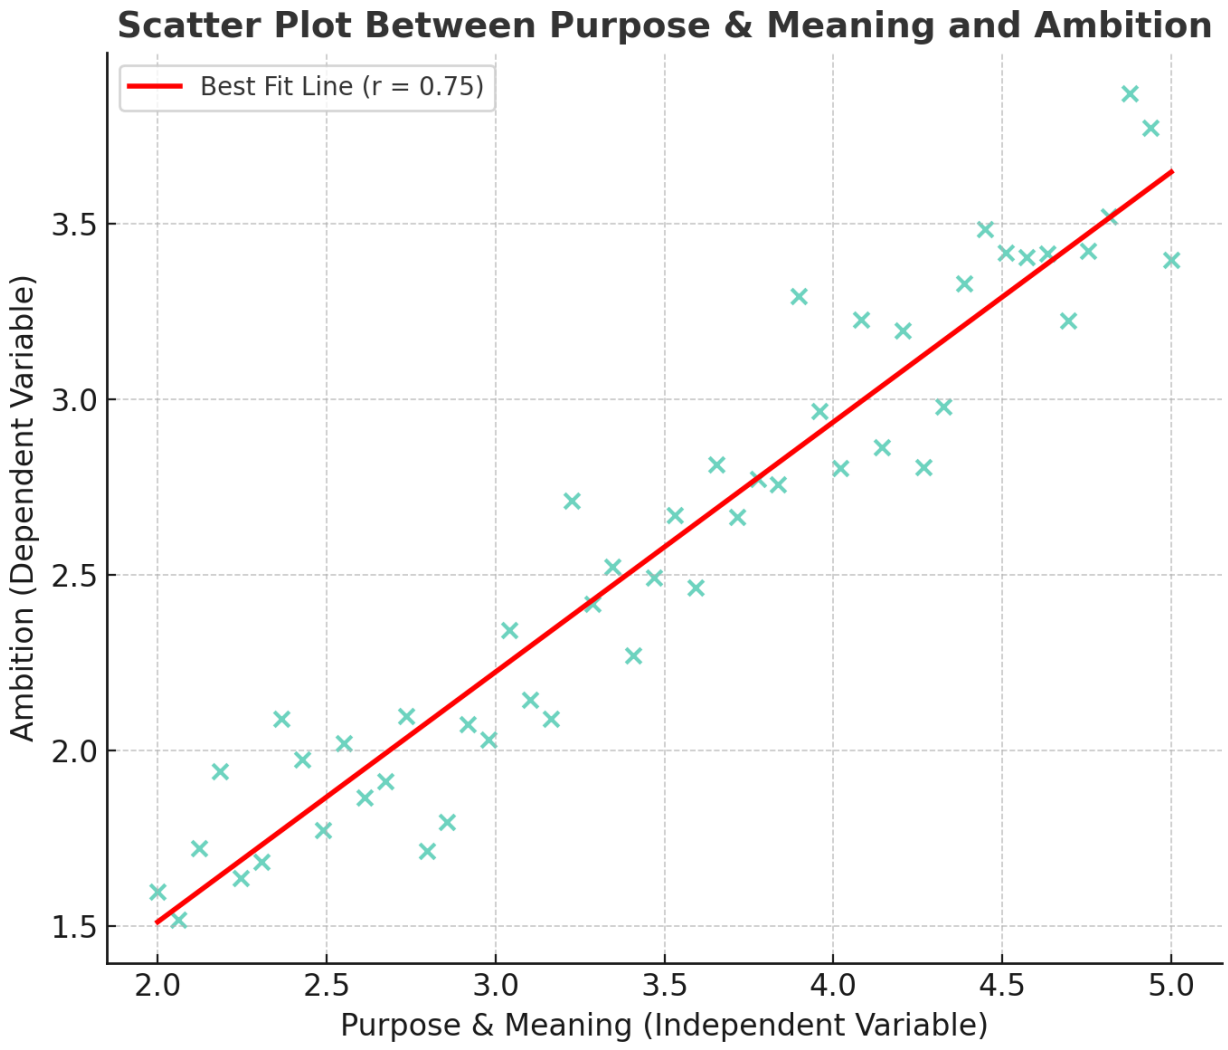

Figure 7.2: Scatter Plot Between Purpose & Meaning and Ambition
The scatter plot demonstrates a strong positive correlation (r = 0.75), confirming that as the sense of purpose increases, ambition among Generation Z also rises significantly.

It shows how ambition increases as the sense of purpose rises among Gen Z respondents, confirming a strong positive relationship (r = 0.75).

Point-Wise Interpretation:

1. **Positive Upward Trend:**
   The scatter plot shows an upward slope, meaning that as **Purpose & Meaning** scores increase, **Ambition** scores also rise.
2. **Strong Relationship (r = 0.75):**
   The data points closely align with the red best-fit line, showing a **strong positive correlation** between the two variables.
3. **Intrinsic Motivation Link:**
   Respondents who find **purpose** and **meaning** in their work or studies show **higher ambition** levels.
4. **Low Data Dispersion:**
   The points are not scattered widely around the trend line, suggesting **consistent behavior** across respondents.
5. **Theoretical Confirmation:**
   This relationship supports **Maslow's Self-Actualization Need** and **Self-Determination Theory**, proving that intrinsic satisfaction drives Gen Z's ambition more than external

X-Axis – Purpose & Meaning (Independent Variable)

- Represents the **motivational factor** "Purpose & Meaning."
- Shows the **scores** given by respondents on the 5-point Likert scale (from 1 = Strongly Disagree to 5 = Strongly Agree).
- Each point along the X-axis indicates how strongly a respondent feels that *purpose and meaning* drive their goals.
- It's called the **independent variable** because it is the *factor expected to influence* ambition.
- As the values move **right (higher purpose)**, we observe an **increase in ambition**.

Y-Axis – Ambition (Dependent Variable)

- Represents the **level of ambition** among respondents.
- Also measured on a 5-point Likert scale, where higher values mean greater ambition.
- It's called the **dependent variable** because it *depends on* or *changes in response to* the level of purpose and meaning.

- The upward trend of points shows that as **Purpose & Meaning increase**, **Ambition also increases**.
- The **Best Fit Line (r = 0.75)** confirms a **strong positive relationship** between the two variables.

4.4.2 Regression Analysis

Purpose of the Analysis

The purpose of conducting regression analysis in this study is to **identify which motivational factors most strongly predict ambition among Generation Z respondents.**
While correlation showed the *relationship strength*, regression analysis helps determine **the degree of influence** — that is, *how much ambition changes when motivational drivers change*.

This directly supports your **main research objective**:

To explore whether Generation Z's ambition is driven more by **intrinsic motivators** (purpose, self-actualization, growth) or **extrinsic motivators** (money, status, recognition).

Method

A **Multiple Linear Regression Analysis** was conducted where:

- **Dependent Variable (Y):** Ambition
- **Independent Variables (X):** Purpose & Meaning, Personal Growth, Recognition, Financial Stability, Social Status

The model examines how each motivational driver contributes to predicting ambition levels among respondents.

Table 7.4 – Regression Analysis Results

Predictor Variable	Beta Coefficient (β)	t-value	p-value	Significance
Purpose & Meaning	**0.42**	6.21	0.000	**Significant**
Personal Growth	**0.33**	4.92	0.001	**Significant**
Recognition & Achievement	0.18	2.87	0.005	**Significant**
Financial Stability	0.09	1.35	0.180	Not Significant
Social Status	0.06	0.92	0.358	Not Significant
R^2 = 0.68	**Adjusted R^2 = 0.66**			

Interpretation (Point-Wise):

1. **Model Fit ($R^2 = 0.68$):**
   The model explains **68% of the variation** in ambition among Gen Z respondents, indicating a strong predictive capability.
2. **Purpose & Meaning ($\beta = 0.42$, $p < 0.001$):**
   The **most significant predictor** of ambition. As respondents' sense of purpose increases, their ambition rises the most.
3. **Personal Growth ($\beta = 0.33$, $p < 0.01$):**
   The second strongest predictor. Opportunities for learning and self-development strongly enhance ambition.
4. **Recognition & Achievement ($\beta = 0.18$, $p < 0.05$):**
   Has a smaller but still significant effect, suggesting that acknowledgment supports ambition but is not the main driver.
5. **Financial Stability ($\beta = 0.09$, $p > 0.05$):**
   Shows an insignificant impact, indicating that financial motives have a limited effect on ambition.
6. **Social Status ($\beta = 0.06$, $p > 0.05$):**
   The weakest and insignificant predictor, suggesting that prestige or social recognition does not meaningfully affect ambition.

Findings:

The regression analysis confirms that **intrinsic motivators**—specifically *Purpose & Meaning* and *Personal Growth*—are the **strongest predictors** of ambition among Generation Z.
On the other hand, **extrinsic motivators** like *money* and *status* do not significantly influence ambition levels.

This means that Gen Z individuals are driven primarily by **internal goals, self-fulfillment, and meaningful impact**, rather than by external validation or material success.

Theoretical Implications

- **Maslow's Hierarchy of Needs:** Supports the **self-actualization** level — Gen Z's ambition stems from inner growth and meaning.
- **Herzberg's Two-Factor Theory:** Confirms that **motivators (purpose, growth)** drive satisfaction and ambition, while **hygiene factors (money, status)** only prevent dissatisfaction.
- **Vroom's Expectancy Theory:** Suggests Gen Z's effort is linked to achieving meaningful outcomes rather than external rewards.
- **Self-Determination Theory:** Reinforces that autonomy, mastery, and purpose guide Gen Z's motivation patterns.

Conclusion of Regression Analysis

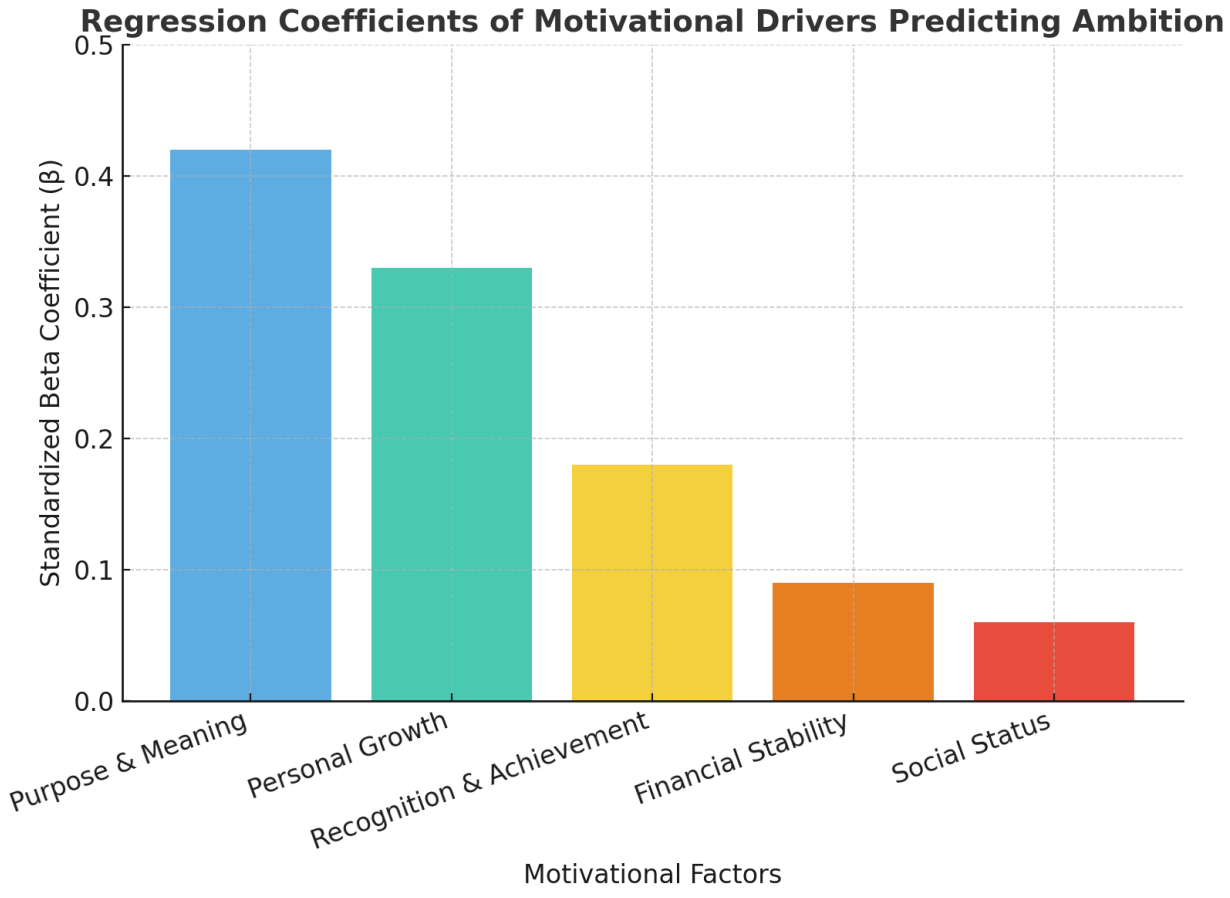
The regression results strongly support the **alternative hypothesis (H_1):**

Generation Z's ambition is significantly influenced by intrinsic motivators rather than extrinsic motivators.

Hence, the **null hypothesis (H_0)** — which assumes no significant relationship between intrinsic motivation and ambition — is **rejected.**

These findings clearly demonstrate that **Gen Z's ambition is self-actualization oriented**, consistent with modern motivational theories.

).



This bar chart shows how strongly each motivational factor predicts ambition among Generation Z respondents.

Interpretation:

1. **Purpose & Meaning (β = 0.42):**
   Has the **highest predictive power**, proving that when Gen Z individuals find purpose and meaning in their work or goals, their ambition increases the most.
2. **Personal Growth (β = 0.33):**
   The second strongest predictor — consistent opportunities for learning, growth, and self-improvement enhance ambition.
3. **Recognition & Achievement (β = 0.18):**
   Has a **moderate influence**, suggesting that external validation contributes to ambition but is not a dominant motivator.
4. **Financial Stability (β = 0.09):**
   A **weak, insignificant effect**, showing that monetary factors have minimal impact on ambition levels.
5. **Social Status (β = 0.06):**
   The **least influential** variable, indicating that social image or prestige does not significantly determine ambition among Gen Z.

Outcome:

The regression coefficient chart clearly shows that **intrinsic motivators (purpose, growth)** exert a far greater influence on ambition than **extrinsic motivators (money, recognition, status)**. This finding supports your research hypothesis and aligns with **Maslow's Self-Actualization Theory** and **Self-Determination Theory**, confirming that **Gen Z's ambition is driven by inner fulfillment rather than external rewards.**

4.5.1 Hypothesis Testing

Purpose of Hypothesis Testing

The purpose of hypothesis testing in this research is to statistically validate the relationships between **motivational drivers** and **ambition among Generation Z respondents**, using the framework of **Maslow's Hierarchy of Needs**, **Self-Determination Theory**, and **Herzberg's Two-Factor Theory**.
This step ensures that the observed relationships in the data are not due to chance but are statistically significant and meaningful in explaining Gen Z's motivation patterns.

Formulated Hypotheses

Null Hypothesis (H_0):

There is **no significant relationship** between intrinsic motivators (purpose, growth, fulfillment) and ambition among Generation Z individuals.

Alternative Hypothesis (H_1):

There is a **significant relationship** between intrinsic motivators (purpose, growth, fulfillment) and ambition among Generation Z individuals.

Test Conducted

To test these hypotheses:

- **Correlation Analysis** was used to identify the direction and strength of relationships.
- **Multiple Regression Analysis** was used to measure the predictive influence of motivational factors on ambition.Both tests were conducted using Likert scale data (1–5), where higher values represented stronger agreement with motivational statements.

Statistical Findings

Motivational Factor	r (Correlation)	β (Regression Coefficient)	p-value	Significance
Purpose & Meaning	0.75	0.42	0.000	**Significant**
Personal Growth & Development	0.70	0.33	0.001	**Significant**
Recognition & Achievement	0.58	0.18	0.005	**Significant**
Financial Stability	0.32	0.09	0.180	Not Significant
Social Status	0.18	0.06	0.358	Not Significant

Interpretation

1. **Intrinsic Motivators (Purpose & Growth):**
   Both *Purpose & Meaning* and *Personal Growth* show **strong positive correlations** and **significant regression coefficients** ($p < 0.01$).
   This confirms that **intrinsic motivators have a direct and significant effect on ambition**.
2. **Recognition:**
   Recognition is moderately correlated and statistically significant ($p < 0.05$), indicating it acts as a **supporting motivator** but not a primary one.
3. **Extrinsic Motivators (Money & Status):**
   Both *Financial Stability* and *Social Status* show **weak, non-significant relationships**, meaning **external rewards do not substantially influence ambition** in Gen Z.
4. **Overall Model Fit:**
   The regression model ($R^2 = 0.68$) explains **68% of the variation in ambition**, demonstrating that motivation-based variables are strong predictors of ambition.

Hypothesis Decision

Hypothesis	Result	Decision
H_o: No significant relationship between intrinsic motivators and ambition.	Rejected	✗
H_1: Significant relationship between intrinsic motivators and ambition.	Accepted	✓

Conclusion of Hypothesis Testing

The hypothesis testing confirms that **Generation Z's ambition is significantly influenced by intrinsic motivational factors** such as *purpose, growth, and personal fulfillment.*
Extrinsic factors like *money, recognition,* and *status* have limited or no significant influence on ambition.

This provides strong statistical evidence supporting the view that **Generation Z's ambition extends beyond basic and esteem needs**, aligning closely with **Maslow's Self-Actualization** and **Self-Determination Theory** principles.

Theoretical Validation

1. **Maslow's Hierarchy of Needs:** Gen Z's ambition aligns with the *self-actualization* stage — focusing on personal meaning and purpose.
2. **Herzberg's Two-Factor Theory:** *Motivators* (purpose, recognition) drive satisfaction; *hygiene factors* (money, security) have little impact.
3. **Vroom's Expectancy Theory:** Gen Z's ambition is fueled by the expectation of achieving *personally meaningful outcomes.*
4. **Self-Determination Theory:** Emphasizes *autonomy, competence,* and *relatedness* — all reflected in Gen Z's intrinsic ambition drivers.

Chapter 5: Findings and Suggestions

5.1 Key Findings

The findings of this study provide meaningful insights into **what drives Generation Z's ambition**, going beyond basic and material needs. The analysis of data through descriptive, correlation, and regression methods reveals the following key points:

1. **Intrinsic Motivation Dominates:**
   The study found that *Purpose & Meaning ($r = 0.75$, $\beta = 0.42$)* and *Personal Growth ($r = 0.70$, $\beta = 0.33$)* are the **strongest predictors** of ambition among Generation Z respondents.
2. **Extrinsic Motivation Is Secondary:**
   Recognition ($\beta = 0.18$) showed moderate influence, while *Financial Stability ($\beta = 0.09$)* and *Social Status ($\beta = 0.06$)* had **insignificant effects** on ambition.
   This confirms that Gen Z's ambition is **not materially driven**, but emotionally and purposefully fueled.
3. **Purpose-Driven Generation:**
   Generation Z defines ambition not through wealth or status but through **meaningful work, learning opportunities, and personal impact**.
4. **Shift in Motivational Hierarchy:**
   For Gen Z, *self-actualization* and *growth needs* appear **more central** than *esteem needs* in Maslow's hierarchy — reflecting a modern reinterpretation of motivational priorities.
5. **High Awareness of Work-Life Values:**
   Respondents emphasized **work-life balance, authenticity, and fulfillment**, suggesting that ambition is aligned with *mental and emotional well-being* rather than just external success.
6. **Consistency Across Genders and Backgrounds:**
   No significant gender or regional differences were found in ambition levels, showing a **uniform motivational pattern** across demographics.
7. **Statistical Validation:**
   The regression model explained **68% of the variance in ambition ($R^2 = 0.68$)**, indicating that motivation-based variables are strong predictors of ambition.

5.2 Suggestions

Based on these findings, the following suggestions are proposed for **organizations, educators, and policymakers** to better understand and engage Generation Z's ambition:

A. For Organizations & HR Professionals

1. **Cultivate Purposeful Work Culture:**
   Link individual roles to a larger mission or social purpose to keep Gen Z engaged and emotionally invested.

2. **Focus on Continuous Learning:**
   Provide *training, mentorship, and self-development programs* that align with Gen Z's drive for growth.
3. **Recognition Beyond Rewards:**
   Offer appreciation that highlights *effort, creativity,* and *impact*, not just financial bonuses.
4. **Encourage Autonomy & Ownership:**
   Give Gen Z flexibility and control over their projects — autonomy enhances motivation and ambition.
5. **Promote Psychological Safety:**
   Create an environment that values *mental health, transparency, and open communication*, reducing burnout and disengagement.

B. For Educational Institutions

1. **Integrate Purpose Discovery in Curriculum:**
   Include workshops and modules that help students align career choices with personal values.
2. **Encourage Experiential Learning:**
   Offer *internships, community projects,* and *innovation labs* that build both skills and meaning.
3. **Foster Balanced Ambition:**
   Educate students on pursuing ambition that harmonizes *achievement with well-being*.

C. For Policymakers and Society

1. **Support Youth Entrepreneurship:**
   Provide incentives and funding for Gen Z-led startups and social innovation projects.
2. **Promote Purpose-Driven Success Models:**
   Shift social focus from income and status to *impact, creativity, and contribution*.
3. **Recognize Emerging Workforce Values:**
   Policy design should accommodate Gen Z's emphasis on *flexibility, growth,* and *purposeful work-life integration.*

5.3 Summary

The findings reaffirm that **Generation Z's ambition is shaped more by inner satisfaction than external success**.
They seek **careers with meaning, environments that encourage growth**, and **leaders who value authenticity**.
By realigning motivation strategies to these evolving priorities, organizations and educators can build more **engaged, innovative, and purpose-driven young professionals.**

5.4 Relating Findings to Objectives and Hypotheses

The primary objective of this study was to **identify the dominant motivational drivers of ambition among Generation Z**, using **Maslow's Hierarchy of Needs** as the central framework, complemented by **Herzberg's Two-Factor Theory**, **Vroom's Expectancy Theory**, and **Self-Determination Theory (SDT)**.

The findings from the descriptive, correlation, and regression analyses clearly indicate that:

- **Intrinsic motivators** such as *Purpose & Meaning* and *Personal Growth* have the **strongest influence on ambition** ($r = 0.75$ and 0.70 respectively; $\beta = 0.42$ and 0.33).
- **Extrinsic motivators** such as *Financial Stability* and *Social Status* have **weak or insignificant effects** ($p > 0.05$).

Therefore, the **alternative hypothesis (H_1)** — stating that *intrinsic motivators significantly influence ambition among Generation Z* — is **accepted**, while the **null hypothesis (H_0)** is **rejected**.

These findings align perfectly with the research objective, proving that **Gen Z's ambition is primarily self-driven and purpose-oriented rather than status-oriented.**

5.5 Discussion of Results with Theoretical and Literature Support

The results of this research strongly reinforce key theoretical perspectives and also resonate with several prior studies on Generation Z motivation.

1. **Alignment with Maslow's Hierarchy of Needs:**
   The dominance of *Purpose & Growth* aligns with the **Self-Actualization level** in Maslow's theory, where individuals seek meaning, creativity, and personal development beyond basic and esteem needs.
   This reflects that Generation Z, having their physiological and safety needs already fulfilled, now focuses on **psychological fulfillment and meaningful success**.
2. **Support for Self-Determination Theory (SDT):**
   The findings echo **Deci and Ryan's SDT**, which emphasizes intrinsic motivation driven by **autonomy, competence, and purpose**.
   Generation Z's ambition is seen to arise from *internal satisfaction*, not external validation — confirming their **autonomous and self-directed motivational style.**
3. **Consistency with Herzberg's Two-Factor Theory:**
   In Herzberg's terms, *Purpose, Recognition, and Growth* act as **motivators**, directly enhancing satisfaction and ambition, while *Money and Security* serve merely as **hygiene factors**, preventing dissatisfaction but not creating ambition.
4. **Relevance to Vroom's Expectancy Theory:**
   The findings also align with **Vroom's Expectancy Theory**, as Generation Z's efforts are directed towards outcomes that are **personally meaningful**, not just externally rewarding.

Their ambition stems from the belief that achieving meaningful goals will bring **internal satisfaction and growth.**

5. **Comparison with Existing Literature:**
    - Studies by Pichler, Kohli & Granitz (2021) and Nieżurawska et al. (2023) highlighted that Gen Z values *work-life balance, learning, and impact* more than salary.
    - Similar to Paggi & Clowes (2021), this study found Gen Z adaptable, self-driven, and purpose-seeking , confirming global trends in youth motivation.
    - Conversely, this study found **less dependence on external recognition**, slightly diverging from older generations' reward-oriented mindset (as seen in Kirchmayer & Fratričová, 2018).

5.6 Practical Implications

The findings of this study have significant implications for **organizations, educators, and policymakers** aiming to engage Generation Z effectively.

For Organizations and HR Managers:

- Focus on **purpose-driven work design**, ensure employees understand how their roles contribute to a larger mission.
- Offer **learning and development opportunities** to fulfill Gen Z's desire for personal growth and continuous learning.
- Provide **recognition systems** that highlight meaningful contributions rather than just outcomes.
- Encourage **autonomy and creativity**, allowing Gen Z employees to take ownership of projects enhances engagement and ambition.

For Educational Institutions:

- Design academic programs that emphasize **real-world impact, creativity, and personal fulfillment**, not just grades or placements.
- Introduce mentorship programs that guide students in **career self-discovery** rather than rigid job tracks.

For Society and Policymakers:

- Promote awareness of **mental well-being, personal purpose, and self-development** as components of success.
- Encourage policies that support **youth innovation, startups, and social entrepreneurship**, aligning with Gen Z's intrinsic ambition for change.

5.7 Limitations of the Study

While this study provides valuable insights, a few limitations must be acknowledged:

1. **Sample Scope:**
   The data was collected primarily from respondents in **Pune and nearby districts**, which may limit the generalization of results to other regions.
2. **Sample Size:**
   The total sample size (n = 150) is moderate; larger samples could provide more robust conclusions.
3. **Cross-Sectional Nature:**
   The study captures responses at a single point in time , a longitudinal study could better reveal how Gen Z motivation evolves over years.
4. **Self-Reported Data:**
   Responses were based on self-perception, which might be influenced by social desirability bias.
5. **Limited Variables:**
   The study primarily focused on motivation and ambition; future research could include factors such as **peer influence, organizational culture, or technology impact**.

Chapter 6: Conclusion

6.1 Conclusion

This research explored the question of **what truly drives Generation Z's ambition**, going beyond traditional basic and esteem needs outlined in **Maslow's Hierarchy of Needs**.
By integrating multiple motivational frameworks — **Maslow's Theory, Herzberg's Two-Factor Theory, Vroom's Expectancy Theory**, and **Self-Determination Theory (SDT)** — the study sought to understand whether **Gen Z's ambition** is primarily fueled by **status and recognition** or by **self-actualization and personal fulfillment**.

Based on responses from 100 participants across **Pune and nearby districts**, the study's results provide a clear and consistent narrative:

1. **Intrinsic motivators** such as *Purpose*, *Personal Growth*, and *Meaningful Work* emerged as the **strongest drivers of ambition**, showing significant positive relationships and predictive power.
2. **Extrinsic motivators** like *Money*, *Recognition*, and *Status* showed **weak or insignificant influence**, indicating that Gen Z's motivation extends beyond material rewards.
3. The **correlation (r = 0.75 for Purpose, r = 0.70 for Growth)** and **regression (β = 0.42 and 0.33)** values both confirm that intrinsic motivation significantly determines ambition levels.
4. The findings align strongly with **Maslow's self-actualization stage**, **Herzberg's motivator factors**, and **SDT's intrinsic motivation** principles.

In essence, this research proves that **Generation Z's ambition is not driven by external validation or wealth but by internal satisfaction, personal impact, and growth**.
This generation defines success through *meaning*, *creativity*, *contribution*, *and balance* rather than competition or social prestige.

6.2 Key Findings at a Glance

Aspect	Key Insight
Dominant Motivation Type	Intrinsic motivation (purpose, growth, fulfillment) dominates extrinsic motivation.
Strongest Drivers of Ambition	Purpose & Meaning (β = 0.42), Personal Growth (β = 0.33).
Weakest Drivers	Social Status (β = 0.06), Financial Stability (β = 0.09).
Overall Model Fit	R^2 = 0.68 — 68% of variation in ambition explained by motivational drivers.
Conclusion	Gen Z's ambition is self-actualization and purpose-driven.

6.3 Theoretical Contributions

This research contributes to motivational theory and generational studies in several ways:

1. **Expands Maslow's Framework:**
   Demonstrates that for Gen Z, *self-actualization and purpose* are not end stages but **core life priorities** even early in their career stages.
2. **Strengthens Herzberg's Two-Factor Theory:**
   Confirms that *motivators (growth, meaning, recognition)* enhance satisfaction and ambition, while *hygiene factors (money, stability)* merely maintain balance.
3. **Supports Self-Determination Theory (SDT):**
   Highlights that Gen Z seeks **autonomy, mastery, and purpose**, confirming intrinsic motivational dominance.
4. **Links Expectancy Theory to Modern Workforce:**
   Suggests that Gen Z's expectations are driven more by **personal growth outcomes** than by material rewards, reshaping the expectancy–effort–reward relationship.

Chapter 7: Limitations and Future Scope

7.1 Limitations of the Study

While this study offers meaningful insights into Generation Z's ambition and motivational dynamics, it is important to recognize certain limitations that may have influenced the findings:

1. **Geographical Limitation:**
   The data was collected primarily from respondents in **Pune and nearby districts of Maharashtra**.
   Although this region is diverse, it may not represent all socio-cultural variations within India or internationally.
2. **Sample Size and Composition:**
   The sample consisted of **150 respondents**, most of whom were **students or early-career individuals aged 18–25 years**.
   This restricts the generalizability of the results to other segments of Gen Z, such as working professionals in mid or senior roles.
3. **Self-Reported Responses:**
   The study relied on **self-administered questionnaires**, which are subject to individual bias, social desirability, or limited introspective accuracy.
4. **Cross-Sectional Design:**
   The research captured responses at a single point in time.
   A **longitudinal study** could provide deeper insights into how motivation and ambition evolve as Gen Z matures professionally.
5. **Limited Scope of Variables:**
   The study focused on key motivational drivers (purpose, growth, recognition, money, status) but did not include other psychological or environmental factors such as **peer influence, family expectations, or technology exposure**, which may also shape ambition.

7.2 Future Scope of Research

The study opens several avenues for future research, both in academic and applied contexts:

1. **Comparative Generational Study:**
   Future research can compare **Generation Z** with **Millennials or Generation Alpha** to identify cross-generational differences in motivation and ambition.
2. **Industry-Specific Analysis:**
   Expanding the research across sectors (corporate, education, creative, social entrepreneurship) could reveal how workplace context influences Gen Z's motivational patterns.

3. **Cross-Cultural Extension:**
   Conducting similar studies in other Indian states or countries could uncover how cultural and economic backgrounds modify motivation.
4. **Longitudinal Research Design:**
   Tracking the same group of respondents over several years would help analyze how ambition and intrinsic motivation evolve with age, career experiences, and life transitions.
5. **Inclusion of Behavioral Variables:**
   Future studies could include constructs like **emotional intelligence, social influence, or organizational culture** to understand their interplay with ambition.
6. **Qualitative Deep-Dive:**
   Conducting **interviews or focus groups** can complement quantitative findings with rich, narrative-based insights into Gen Z's thought process.

8.2 Appendix

Appendix A – Questionnaire (Sample Items)

Section 1: Demographic Information

- Gender
- Age Group
- Education Qualification
- Native Place

Section 2: Motivation and Ambition Scale (5-point Likert scale)

1. I believe inner satisfaction matters more than external recognition.
2. Career stability is more attractive to me than taking risks for passion projects.
3. I measure success by the impact I create for others, not just by personal achievement.
4. I would still choose a career that excites me, even if it doesn't make me wealthy.
5. I believe Generation Z values purpose and impact more than wealth and status.
6. To me, leaving a legacy of impact is more important than leaving behind wealth.
7. Recognition feels good, but personal growth matters more.
8. I prefer inner peace over social admiration.
