# PROJECT REPORT

ON

**ERP** Application for Food and Beverages

 $\mathbf{BY}$ 

Mr. Mayur Shridhar Balkundikar

**MCA-III SEM-VI** 

SAVITRIBAI PHULE PUNE UNIVERSITY

SUBMITTED TO

MASTER OF COMPUTER APPLICATION

MES's INSTITUTE OF MANAGEMENT AND

CAREER COURSES, PUNE

2017-2020

Office Address- 02nd Floor, Near Yashshri Garden, Karvenagar Pune. Pin- 411 052.

Web- www.globalhubtechnosys.com

REF: Spon-INT0416-2020 Date: 30/03/2020

#### INTERNSHIP LETTER

This is to certify that Mr. Mayur Shridhar Balkundikar student of MCA from "MES Institute of Management and Career Courses, Pune" has been completed Internship on "ERP Application for Food and Beverages" as a partial fulfillment of requirement towards Final Year of their MCA project.

University Name- Savitribai Phule Pune University.

Duration- 18th Dec 2019 to 17th June 2020

Branch-MCA

Technology- Java

As abided by intellectual property and confidentiality policy of Global Hub Technology

We wish them every success in life.

AUTHORIZED PERSON SIGN GLOBAL HUB TECHNOLOGY

# INSTITUTE OF MANAGEMENT AND CAREER COURSES (IMCC)

Ref. No: MCA/Project/023/2020-21

Date : 14/09/2020

# **CERTIFICATE**

This is to certify that the Project Report entitled "*ERP Application for Food and Beverages*" is prepared by *Mayur Balkundikar*, a student of *M.C.A.* Course for the Academic Year 2019-20 at M.E.Society's Institute of Management & Career Courses (IMCC), Pune - 411 038. M.C.A Course is affiliated to Savitribai Phule Pune University.

To the best of our knowledge, this is original study done by the said student and important sources used by him have been duly acknowledged in this report.

The report is submitted in partial fulfillment of M.C.A. Course for the Academic Year 2019-20 as per the rules & prescribed guidelines of Savitribai Phule Pune University.

March

Dr. Ravindra Vaidya
Department of MCA, IMCC

Dr. Santosh Deshpande HOD, Director, IMCC

### **ACKNOWLEDGEMENT**

I take this opportunity to express my profound gratitude and deep regard to my project guide **Mr. Mukul Kulkarni** for his exemplary guidance, monitoring and constant encouragement throughout the course of this project. The blessing, help and guidance given by him time to time shall carry me a long way in the journey of life on which I am about to embark.

I also take this opportunity to express a deep sense of gratitude to DR. Santosh Deshpande, Director MES'S I.M.C.C. and DR. Ravindra Vaidya, Head of Department MES'S I.M.C.C. and Mrs. Apurva Barve, Class Coordinator for their cordial support, valuable information and guidance, which helped me in completing this through various stages.

I am obliged to staff members of MES'S I.M.C.C. College for the valuable information provided by them in their respective fields. I am grateful for their respective fields. I am grateful for their cooperation during the period of my assignment. Finally, I am extremely thankful to my parents, classmates, teaching and non-teaching staff for their kind and whole cooperation.

Mayur S. Balkundikar

# CHAPTER 1 INTRODUCTION

# 1.1 Company Profile

Global Hub Technology is a leader in Software Development and empowers IT individuals with competitive advantage. Global Hub Technology dedicates itself to simplify the technology trends with its great R&D Division. Global Hub Technology is an Indian Software Development Company. A rapidly growing software company with a team of experienced intellectuals working in various technologies. It deals with Product and Service based applications in all major areas. We are committed to the qualitative, efficiency, innovativeness and timeliness of our deliverables with high focus on maximum customer satisfaction. Global Hub Technology is a high end full service IT solution Company based in India. Established in 2012, we are pioneer in providing total offshore and onshore web based solutions for small

to large corporate companies. Global Hub Technology provides IT services to clients globally as partners to conceptualize and realize technology driven business transformation initiatives. Today we are comprised of a team of programming technicians, designers, and marketing executives- selectively chosen to lead our clients in their IT solutions. Global Hub Technology has grown from strength to strength in both our Business and Software Solutions arena. From our IT Consulting as well as Custom Application Development, Web Development and E-commerce all of which help our customers with their diverse yet demanding needs. We are geared towards generating business value to the companies by providing expertise personnel and software services.

#### **Our Vision**

"To Provide Quality performances and to develop success path for every industry's growth and progress."

#### **Our Mission**

"To provide soft solutions for each and every problem to achieve the goal of organization."

#### **Our Value**

We at Global Hub Technology aim and are continuously approaching towards customer satisfaction and create a value to customer along with yielding knowledge for us by maintaining a motivated workforce.

#### **Our Services**

Global Hub Technology provides various Software Development services to the clients located worldwide in order to rationalize their business processes and e-enabling their business. We, at Global Hub Technology strongly believe that technology is a true business enhancer and you should not implement technology for the sake of it. That's why; we help you make best use of information technology. With the use of our services such as application development,

application migration and application maintenance for your existing applications, you can formulate the best possible use of technology. We are a team of professional organization teamed by competent, committed, qualified and experienced personnel in various field. With the help of our commitment to professionalism and excellence. The programmers we design are developed to meet specific organizational needs. We provide a service that provides clients with value for each rupee invested. So feel free to come forward and avail the opportunity of getting reasonably priced consultancy services from us.

# IT PROVIDES THE FOLLOWING SERVICES TO THE CLIENTS:-

- Data Warehousing and Data Mitigation
- Data Migration
- Software Development
- SAP
- Cloud Sales Force
- High Availability

- Internet of Things
- Java Technology

# Address-

02<sup>nd</sup> Floor, Near Yashshri Garden, Karvenagar Pune. Pin- 411 052.

Contact Person- Miss. Sneha Marathe

# 1.2 Existing System and Need for System

- In existing System shopping done in going in actual market, so time and cost are increased.
- 2. In existing System shopping done in traditional way.
- 3. Traditional transactions are limited in terms of how many people can be reached at a single time.
- 4. Flipkart and ebay is the shopping site but they cannot provide facility for adding new product on site for any business parties.

# **Need for System**

This **Annapurna ECW Integrated System** Application is developed in JAVA for online shopping purpose. This website is useful for customer, Dealer and employee. Customer is able to register and login into system. Customer is able to purchase product from this website he have a facility to pay amount online. Customer can create his

shopping cart and manage his cart. Customer can also post his complaints on to the portal. Customer also facilities like wish list management, view order detail, order tracking, view shopping history, etc. In this website Dealer is able to add his product on shopping portal. Also able to view order details of customers. Dealer can select and purchase the package for adding product on website. Package contains number of items added on portal and validity of package. Dealer can view his account balance at any time. He can also able to track customer order and manage discount offers. Admin is able to view and control other user of the system. He is able to add new category on website. Also he/she able to remove, blocks any user. He is able to manage package and security question on the portal. Also he can add new location or area in to the system. Employee on this portal is useful for providing support to customer for his order status and any other purpose. He can solve the query posted by customer. Also able to view orders and feedback of customer. Admin, Dealer, customer and employee able to view various report like invoice of order, total number of customer registration, total product sale, total Dealer registration, etc.

# 1.3 Scope of the system

- In this system you can able to purchase product at any time, place.
- 2. Online stores must describe products for sale with text, photos, and multimedia files.
- 3. One advantage of shopping online is being able to quickly seek out deals for items or services with many different vendors.
- 4. Choose products faster and easier at one place.
- 5. Alerts and real time reporting through Emails (to both vendor as well as buyer).
- 6. Reports generated can be saved for future references.
- 7. Inventory reports for the vendor/seller on daily, monthly, yearly basis.
- 8. Good/Trusted & Tension free delivery services.
- 9. Reduced search costs for consumers & Lower market entry costs for merchants.

10. Becomes simpler, faster, with more accurate price discovery.

# 1.4 Operating Environment Hardware and Software

# **1.4.1 Operational Environments**

# **Hardware Requirements:**

# • Server side :-

RAM	4 GB
Hard Disk	60 GB and Above.

# • Client side :-

RAM	Minimum 2 GB
Hard Disk	Minimum 80 GB
Processor	Dual Core or above

# **Software Requirements:**

# • Server side :-

Operating system	Linux/Windows
Processor	Core 2 Duo
Software	Web Server, JDK 1.7, Html5,Css3 Oracle 10g

# • Client side :-

Development	JDK 1.7
<b>Technologies</b>	
Development	NetBeans 7.4
Tools	
Application	Apache Tomcat
Server	
Database	MySql
<b>Operating System</b>	Windows 7 and above
Web Browser	Google chrome, Mozilla Firefox
Hardware	P-IV or +, 1 GB RAM, 80 GB HDD
Supporting	Ajax,Jquery,JavaScript.
Technologies	

# 1.5 Detail Description of Technology Used

Java is a programming language and computing platform first released by Sun Microsystems in 1995. There are lots of applications and websites that will not work unless you have Java installed, and more are created every day. Java is fast, secure, and reliable. From laptops to datacenters, game consoles to scientific supercomputers, cell phones to the Internet, Java is everywhere!

#### • JSP in the servlet container

JSP pages must be deployed inside a Java servlet container. In order to deploy a Java web application based on JSP and servlets, you will package your .jsp files, Java code, and application metadata in a .war file, which is a simple .zip file with a conventional structure for web applications.

#### • MVC in JSP

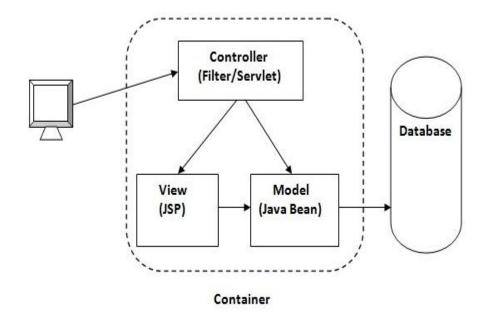

MVC stands for Model View and Controller. It is a design pattern that separates the business logic, presentation logic and data. Controller acts as an interface between View and Model. Controller intercepts all the incoming requests.

Model represents the state of the application i.e. data. It can also have business logic.

View represents the presentation i.e. UI (User Interface).

# Advantage of MVC (Model 2) Architecture

- 1. Navigation Control is centralized
- 2. Easy to maintain the large application

In the Web Development field, Model-View-Controller is one of the most talked-about design patterns in the web programming world today. MVC Architecture was initially included in the two major web development frameworks – Struts and Ruby on Rails. In this article, let's explore a little bit about MVC Architecture in Java.

The topics that will be covered in this article are as follows:

• What is MVC Architecture in Java?

- Advantages of MVC Architecture
- Demo: Implementation of MVC using Java

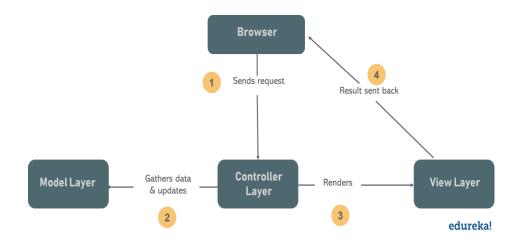

Before we actually get into the technicalities of MVC Architecture, there are certain concepts that you need to know.

- Design Pattern, in software engineering, is a technique to solve
   a commonly occurring problem when designing software.
- Designing Model, specifies what type of architecture you use to solve the problem or design the model.
- There are two types of design models: Model 1 Architecture,
   Model 2(MVC) Architecture.
- What is MVC Architecture in Java?

Model designs based on MVC architecture follow the MVC design pattern and they separate the application logic from the user interface when designing software. As the name implies MVC pattern has three layers, which are:

• Model – Represents the business layer of the application

- View Defines the presentation of the application
- Controller Manages the flow of the application

In Java Programming context, the Model consists of simple Java classes, the View displays the data and the Controller consists of servlets. This separation results in user requests being processed as follows:

- The browser on the client sends a request for a page to the controller present on the server
- 2. The controller performs the action of invoking the model, thereby, retrieving the data it needs in response to the request
- 3. The controller then gives the retrieved data to the view

4. The view is rendered and sent back to the client for the browser to display

Separating a software application into these three distinct components is a good idea for a number of reasons. Let's take a look at what those are.

### Advantages of MVC Architecture in Java

MVC architecture offers a lot of advantages for a programmer when developing applications, which include:

- Multiple developers can work with the three layers (Model,
   View, and Controller) simultaneously
- Offers improved scalability, that supplements the ability of the application to grow
- As components have a low dependency on each other, they are easy to maintain
- A model can be reused by multiple views which provides reusability of code

- Adoption of MVC makes an application more expressive and easy to understand
- Extending and testing of the application becomes easy

Now you know why the MVC is the most popular design patterns in the web programming world. But, if you are still struggling to get your head around the concept of MVC, don't worry.

# Implementation of MVC using Java

To implement a web application based on MVC design pattern, we will create

- Course Class, which acts as the model layer
- Course View Class, which defines the presentation layer (view layer)
- Course Controller Class, which acts as a controller

# The Model Layer

In the MVC design pattern, the model is the data layer which defines the business logic of the system and also represents the state of the application. The model objects retrieve and store the state of the model in a database. Through this layer, we apply rules to data, which eventually represents the concepts our application manages. Now, let's create a model using Course Class.

# CHAPTER 2 PROPOSED SYSTEMS

# 2.1 Proposed System

In this proposed system-

- In this system you can able to purchase product at any time,
   place.
- Online stores must describe products for sale with text, photos, and multimedia files.
- One advantage of shopping online is being able to quickly seek
   out deals for items or services with many different vendors.
- Choose products faster and easier at one place.
- Alerts and real time reporting through Emails (to both vendor as well as buyer).
- Reports generated can be saved for future references.
- Inventory reports for the vendor/seller on daily, monthly, yearly basis.
- Good/Trusted & Tension free delivery services.
- Reduced search costs for consumers.

- Becomes simpler, faster, with more accurate price discovery
- Lower market entry costs for merchants

# **Problem Statements**

# **Problem No 1:**

The problem of	Data duplication
Affects	System.
The impact of which is  Same data gets repeated over and over since workers find it hard to keep track of the document information and transactions.	
A successful solution would	Annapurna ECW Integrated System application which helps to reduce the data duplication.

# **Problem No 2:**

The problem of	Inconsistency of data	
Affects	System.	
The impact of which is  There will be unavailability for future use, since might get misplaced during manual filing. So won't be preserved properly for future use		
A successful Annapurna ECW Integrated System application would which helps to data consistency.		

# **Problem No 3:**

The problem of	Report generation.
Affects	Dealer.
The impact of which is	Reports are generated manually by Dealer which requires more time and efforts.
A successful solution would	By using this system Dealer can generate reports with different criteria's.

# **Problem No 4:**

The problem of	Viewing reports.
Affects	Dealer.
The impact of which is	Reports are viewed by higher authority at month end only.
A successful solution would	By using this system, Dealer can view reports any time and immediately give remarks or suggestions.

# 2.2 Objectives of System

- To Maintain Ubiquity: It is available just about everywhere and at all times.
- To Maintain Global reach: The potential market size is roughly equal to the size of the online population of the world.
- To Maintain Universal standards: The technical standards of the Internet and therefore of conducting ecommerce, are shared by all of the nations in the world.
- Richness: Information that is complex and content-rich can be delivered without sacrificing reach.
- Interactivity: Annapurna ECW Integrated System technologies allow two-way communication between the merchant and the consumer.
- Information density: The total amount and quality of information available to all market participants is vastly increased and is cheaper to deliver.

- Personalization/Customization: Annapurna ECW Integrated
   System technologies enable merchants to target their
   marketing messages to a person's name, interests and past
   purchases. They allow a merchant to change the product or
   service to suit the purchasing behavior and preferences of a
   consumer.
- Social technology: User content generation and social networking technologies

# 2.3 User Requirements

# 2.3.1 Feature Set

- Payment Gateway.
- SEO (Search Engine Optimization).
- Review product
- Email notification of orders.
- Order tracking
- Report generation.

# 2.3.2 Non-functional requirement

- Availability: The system will be available 24\*7\*365
- Capacity: Any time you can use the system within a day and the system will able to generate same results each time.
- Throughput: The system performs the speedy operations and has very less throughput time.

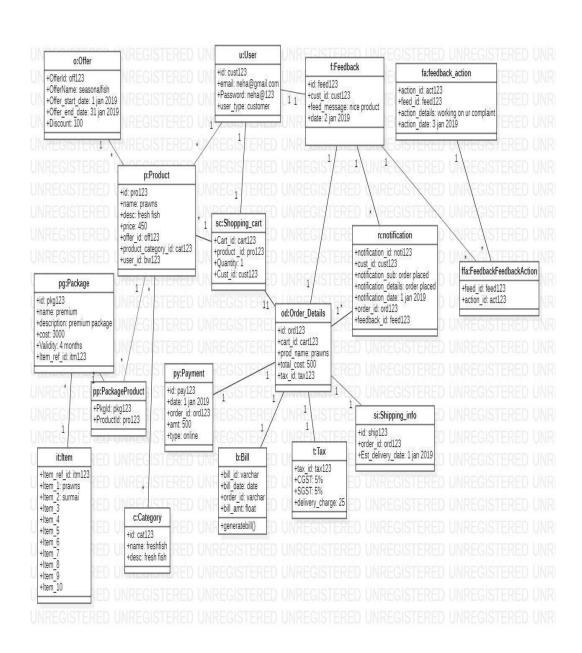

• Security: Only users of the system can have the specified access to the system.

# 2.3.3 Stakeholder Summary

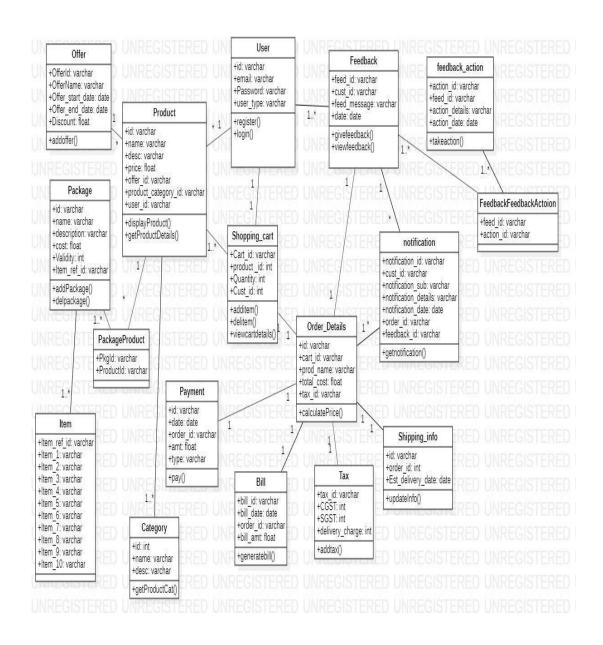

Name	Represents	Role
Admin	Admin is the person who provide login to Dealer.	Admin is the person who provide the login Id and password to Dealer.
Dealer	Dealer is person who represents their business.	Dealer is the person who can have all authority of launching his product.
Customer	Customer is user which purchase product online.	Customer is user he can able to purchase his product from website and also he can able to add his product on site.
Employee	Employee is the person who manage customer services	Employee is the person who manage customer services like view complaint and provide solution for that complaints
Developer & maintenance person	The person who developed the system & can do all changes according to requirements.	These people can develop system.

## 3.10 Module Specification

The system contains different modules as:

- Administrator
- Dealer
- Customer
- Employee

#### 1. Administrator:

- Admin has secure login.
- Admin can be able to add/delete product Catagariwise on site
- Admin also set the Discounts and the Offer Period.
- Create package.
- Manage FAQ
- Manage Advertisement.
- Manage Security Question
- Manage New Area of Location
- View orders Report Date wise.

- Maintain and View Employee account details.
- View Added Product Details.
- ADD/Update/Delete the Banner on Each Page.
- View Out of Stock Product
- View Report of Cash Order and Cash on Delivery Order.
- Order Management(View Report of Delivered and Undelivered Product)
- Warehouse Management(Stock Management)
- View Report of Profit and the Loss.
- Forgot Password.
- Maintain Contact Us Data.
- Change Password.
- Logout.

#### 2. Dealer:

- Dealer has secure login.
- Dealer can be able to add/delete his product on site
- Also Dealer also able to purchase product online from other business parties.
- Purchase package.
- View orders.
- View account details.
- Order Tracking.
- View Added Product Details.
- Also he can able to manage discounts and offers of his product.
- Forgot Password.
- Change Password.
- Logout.

## 3. Employee Module:

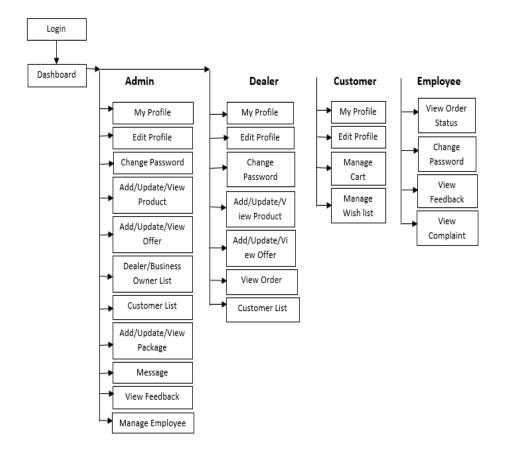

- Employee has a secure login.
- Manage his profile.
- View order status of customer.
- Answer or solution to customer queries.
- View feedback.
- Message sending.
- View Various Reports.
- Forgot Password.
- Change Password.
- Logout.

#### 4. Customer Module:

- Customer has a secure login.
- Manage his profile.
- View and Search all Product Category wise.

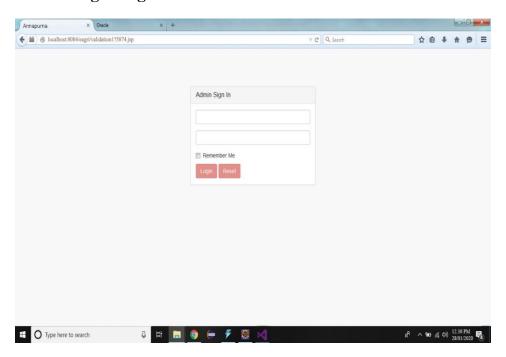

- View order status.
- Return the Damage Products.
- Send Feedback.
- Order Tracking Status.
- View all Reports of all products.
- Forgot Password.
- Change Password.
- Logout.

## 3.14 Table Specification

Table Name	User	User					
<b>Table Description</b>	It stores infor	mation of User	rs of the	system.			
Primary key	User id						
Field Name	Datatype	Constraint	Null	Description			
User id	Int(11)	Primary key	No	Unique Identification number for user			
User_first_name	Varchar(20)		No	User First name			
User_last_name	Varchar(20)		No	User Last name			
User_dob	Date		No	User DOB			
User_gender	Varchar(20)		No	User Gender			
User_contact	Int(10)		No	User Contact			
User_permanent_add	Varchar(20)		No	User Address			
User_city	Varchar(20)		No	User City			
User_landmark	Varchar(20)		No	User Landmark			

User_state	Varchar(50)	No	User State
User_country	Varchar(30)	No	User Country
User_pincode	Int(10)	No	User Pincode
User_email	Varchar(20)	No	User Email address
User_pass	Varchar(20)	No	User password
User_type	Varchar(20)	No	User Type

Table Name	User_type					
Field Name	Datatype	Constraint	Null	Description		
type_id	Varchar(10)	Primary key	No	User type id		
Admin	Varchar(10)		No	Admin		
Business Owner	Varchar(10)		No	Business Owner		
Customer	Varchar(10)		No	Customer		
Employee	Varchar(10)		No	Employee		

<b>Table Name</b>	Package					
Field Name	Datatype	Constrain t	Nul l	Description		
Package_id	Varchar(10)	Primary key	No	Package Id		
Package_name	Varchar(20)		No	Package name		
Package_descripti	Varchar(10		No	Package		
on	0)			description		
Package_cost	Float(10)		No	Package cost		
Item_reference_id	Varchar(10)	Forei gn	No	FK to Item Table		
		Key				
Start data	DateTime		No	Package Start		
Start_date	DateTille		NO	Date		
				and Time		
End_date	DateTime		No	Package End Date and time		

Table Name	Item					
Field Name	Datatype	Constraint	Nul	Description		
			l			
Item_reference_	Varchar(1	Primary key	No	Item Identification		
id	0)			no.		
Item_1	Varchar(2			Item 1 Name		
	0)					
Item_2	Varchar(2			Item 2 Name		
	0)					
Item_3	Varchar(2			Item 3 Name		
	0)					
Item_4	Varchar(2			Item 4 Name		
	0)					

Item_5	Varchar(20)	Item 5 Name
Item_6	Varchar(20)	Item 6 Name
Item_7	Varchar(20)	Item 7 Name
Item_8	Varchar(20)	Item 8 Name
Item_9	Varchar(20)	Item 9 Name
Item_10	Varchar(20)	Item 10 Name

Table Name	ProductCategory				
Field Name	Datatype	Constraint	Null	Description	
product_category_id	Varchar(10)	Primary key	No	product category Id	
product_category_name	Varchar(20)		No	product category name	
product_category_description	Varchar(1000)		No	product category name description	

Table Name	ProductDetails			
Field Name	Datatype	Constraint	Null	Description
product_id	Varchar(10)	Primary key	No	Product Id
product_description	Varchar(200)			Product description
user_id	Varchar(20)	Foreign key	No	Dealer Id
Product_stock	Int(10)		No	Product Stock

product_image	Longblob		No	Product image
product_price	Float(10)		No	Product price
product_category_id	Varchar(10)	Foreign key	No	product category Id
Offer_id	Int(10)	Foreign key		Offer Id

Table Name	Pkg_Product			
Field Name	Datatype	Constraint	Null	Description
Package_id	Varchar(10)	Foreign key	No	Package Id
Product_id	Varchar(10)	Foreign key	No	Product Id

Table Name	Shopping_cart_detail			
Field Name	Datatype	Constraint	Null	Description
Cart_id	Varchar(10)	Primary key	No	Cart Id
product_id	Int(10)	Foreign key	No	Product Id
Quantity	Int(10)		No	Product quantity

Table Name	Order_Details			
Field Name	Datatype	Constraint	Null	Description
order_id	Varchar(10)	Primary key	No	Order Id
cart_id	Varchar(10)	Foreign key	No	Cart Id
order_date	DateTime		No	Order date and time
order_delivery_date	DateTime		No	Order delivery date and time
order_shipping_address	Varchar(200)		No	Shpping address
tax_id	Varchar(200)	Foreign key	No	Tax Id
Price	Float		No	Total Price

Table Name	Feedback			
Field Name	Datatype	Constraint	Null	Description
feedback_id	Varchar(10)	Primary key	No	Feedback Id
feedback_type	Varchar(20)		No	Feedback type
feedback_message	Varchar(300)		No	Feedback message
feedback_date	Date		No	Feedback date
User_id	Varchar(10)	Foreign key	No	Customer Id
order_id	Varchar(10)	Foreign key	No	Order Id

Table Name	Feedback_Action			
Field Name	Datatype	Constraint	Null	Description
action_Id	Varchar(10)	Primary key	No	Action Id
feedback_id	Varchar(10)	Foreign key	No	Feedback Id
action_detail	Varchar(1000)		No	Feedback Action
action_date	Date		No	Action date

Table Name	ShippingDetails			
Field Name	Datatype	Constraint	Null	Description
shipping _id	Varchar(10)	Primary key	No	Shipping Id
order_id	Varchar(10)	Foreign key	No	order Id
Est_delivery_date	Date		No	Est delivery date
Order_status	Varchar(20)		No	Order status

Table Name	Offer			
Field Name	Datatype	Constraint	Null	Description
OfferId	Varchar(10)	Primary key	No	Offer Id
OfferName	Varchar(20)		No	Offer name
Offer_start_date	Date		No	Offer Start Date

Offer_end_date	Date	No	Offer Finish Date
Discount	Float(10)	No	Product discount

Table Name	Bill			
Field Name	Datatype	Constraint	Null	Description
bill_id	Varchar(10)	Primary key	No	Bill Id
BillDate	DateTime		No	Date of bill
OrderId	Varchar(10)	Foreign key	No	Order Id
TotalBillAmt	Float(10)		No	Total bill amount

Table Name	Payment				
Field Name	Datatype	pe Constraint Null Descr			
payment_id	Varchar(10)	Primary key	No	Payment Id	
order_id	Varchar(10)	Foreign key	No	Order Id	
package_id	Varchar(10)	Foreign key	No	Package Id	
Amount	Float(10)		No	Total Amount	
type_of_payment	Varchar(50)		No	Payment Type	
Status	Varchar(20)		No	Payment Status	

Table Name	Notification				
Field Name	Datatype	Constraint	Null	Description	
notification_id	Varchar(10)	Primary key	No	Message Id	
User_id	Varchar(10)	Foreign key	No	Customer Id	
notification_sub	Varchar(300)		No	Notification subject.	
notification_detail	Varchar(2000)			Notification Detail.	
notification_date	DateTime		No	Notification date and time	
order_id	Varchar(10)	Foreign key	No	Order Id	
feedback_id	Varchar(10)	Foreign key	No	Feedback Id	

**3.15 Test Procedures and Implementation** 

Testing is the exposure of system to trial input to see whether it produces correct output. Testing assumes requirements that are already validated. Testing cannot guarantee correctness, no method can guarantee correctness. Testing is the process of detecting presence of faults. Debugging is the process of locating and correcting faults.

Once source code has been generated, software must be tested to uncover as many errors as possible before delivery to your customer. Our goal is to design a series of test cases that have a high likelihood of finding errors. That's where Software Testing techniques enter the picture.

A set of test cases designed to exercise both internal logic and external requirements is designed and documented, expected results are defined and actual results are recorded.

Test Case	LOGIN_01				
ID					
Test case	Test Case For	User			
Name					
Pre-	User must log	in First			
Requisite					
Step No	Step to be	Expected	<b>Actual Result</b>	Pass/	Remark
	Executed	Result		Fail	

1	1)Keep	It should	Display error	pass	Require
	Username	display	messages for		field
	and	the error	both textboxes		validatio
	Password	'These			n is
	blank	fields			checked
	2)Press	cannot be

	tab &	display	
	Sent sub	in the	
	tab.	Inbox	
		sub tab	
		& Sent	
		sub tab	

## **Implementation**

#### **Strategies used for Testing**

#### 1. Unit Testing

Unit testing concentrates verification on the smallest element of the program – the module. Using the detailed design description important control paths are tested to establish errors within the bounds of the module.

#### 2. Integration testing

Once all the individual units have been tested there is a need to test how they were put together to ensure no data is lost across interface, one module does not have an adverse impact on another and a function is not performed correctly.

#### **System testing for the current system:**

In this level of testing we are testing the system as a whole after integrating all the main modules of the project. We are testing whether system is giving correct output or not. All the modules were integrated and the flow of information among different modules was checked. It was also checked that whether the flow of data is as per the requirements or not. It was also checked that whether any particular module is non-functioning or not i.e. once the integration is over each and every module is functioning in its entirety or not.

In this level of testing we tested the following: -

- Whether all the forms are properly working or not.
- Whether all the forms are properly linked or not.
- Whether all the images are properly displayed or not.
- Whether data retrieval is proper or not.

# CHAPTER 4 USER MANUAL

#### 4.1 User Manual

#### 4.1.1 User Manual for Administrator

The administrator is the main user of this system. The administrator has some extra features that are not provided to users/employee.

#### 1) Registration:

This is provided to register with Food CRM system.

By using it you can do registration with the system.

#### 2) Login:

This is provided to do the login.

The Admin must have logged in to use the system.

So to do the login you can use this.

Here simply by entering your login details you can logged in.

#### 3) Add Product/View Product:

This is to add new product to the system.

View all the products in the system

#### 4) Add Offer/View Offer:

This is to add new offer on the product in the system.

View all the offers available on products in the system.

#### 5) Customer List:

To view all Customers present in the system.

#### 6) Dealer/Business Owner List:

To view all dealers present in the system.

#### 7) Add/View Package:

This is to add new package for dealers in the system.

View all the packages available for dealers in the system.

#### 8) View Feedbacks:

View all the feedbacks of customers about the products in the system.

#### 9) Manage Employee:

This is to add new employee in the system.

Delete the employee from the system

Manage all the employees in the system

#### 10) Message:

To send the messages to dealers or employees about the queries or information.

#### 4.1.2 User Manual for Business Owner/Dealer

#### 1) Registration:

This is provided to register with the system.

By using it you can do registration with the system.

#### 2) Login:

This is provided to do the login.

The distributor must have logged in to use the system.

So to do the login you can use this.

Here simply by entering your login details you can logged in.

#### 3) Add Product/View Product:

This is to add new product to the system.

View all the products in the system

#### 4) Add Offer/View Offer:

This is to add new offer on the product in the system.

View all the offers available on products in the system.

#### 5) Customer List:

To view all Customers present in the system.

#### 6) Order List:

To view all the orders of customers present in the system.

#### 4.1.3 User Manual for Employee

#### 1) Login:

This is provided to do the login.

The employee must have logged in to use the system.

So to do the login you can use this.

Here simply by entering your login details you can logged in.

#### 2) View Order Status:

To view the order status of all customers in the system.

#### 3) View Feedback:

To view the feedback of customers about related orders in the system

## 4) Message Sending:

To send the message related customers queries or reply to customers feedback

## 5) View Reports:

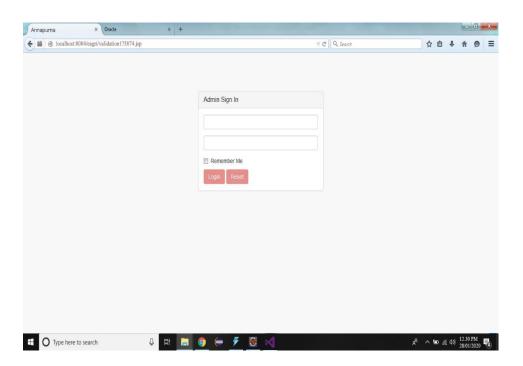

To view reports of all the data present.

## 4.2 Operation Manual / Menu Explanation

#### 4.2.1 User Manual for Business Owner/Dealer

#### 1. Login

- This is provided to do the login.
- The Admin must have logged in to use the system.
- Here simply by entering your login details you can logged in.

#### 2. Add Business Owner:

 This can be add new Business Owner to the System.

#### 3. Add Employee:

 This can be add new Employee to the System.

#### 4. Add Package:

• This can be add new package to the System.

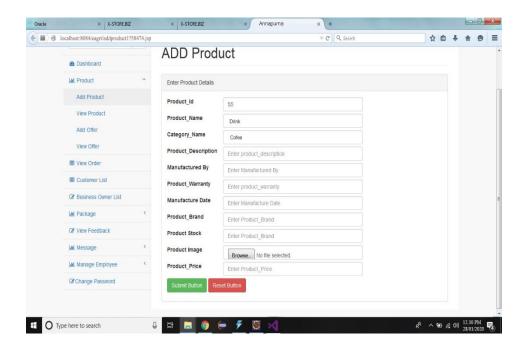

#### 5. Manage Offers:

• This can be add and update offers on the Product.

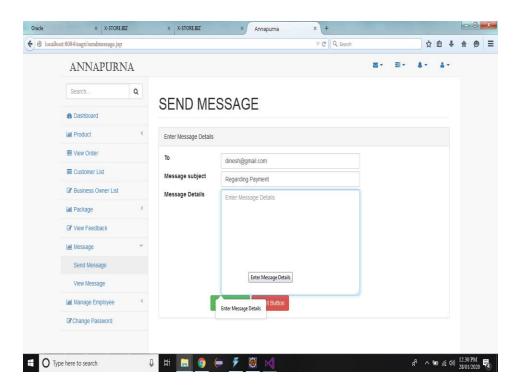

## 6. Manage Products:

• This can be add and update Product

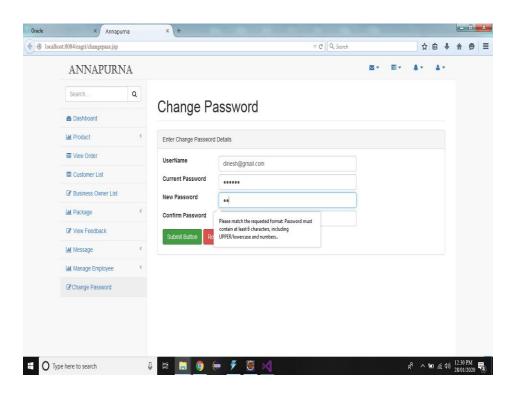

### 7. Send Messages:

 Admin can send messages to the employee and business owner regarding their work

## 8. Change Password:

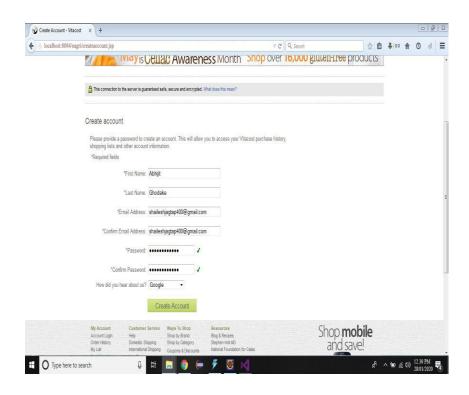

• Admin can change his Password

## **4.2.2 Operations Manual for Customer:**

### 1. Create new account:

- Here user can create their new account by filling information
- After filling the user information user can set his email id and password

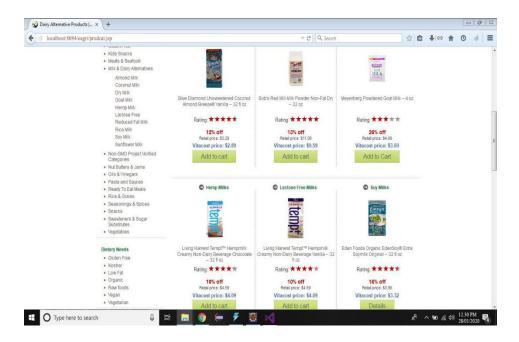

## 2. Login:

- This is provided to do the login.
- The Customer must have logged in to use the system.
- Here simply by entering your login details you can logged in

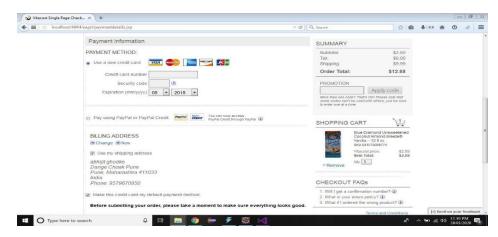

### 3. Purchase Product:

• Customer can search product, select, product, add that product to the cart.

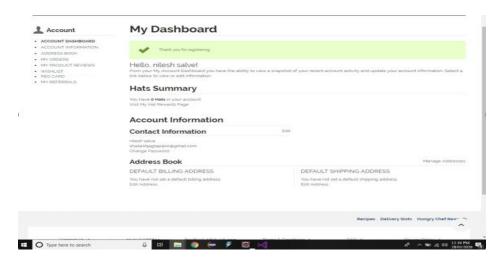

## 4. Payment:

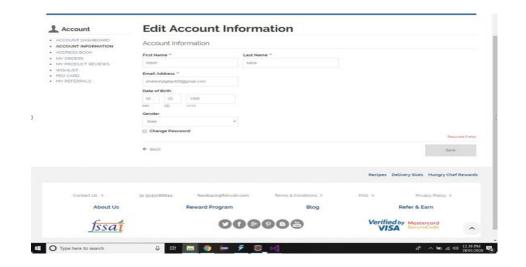

• Customer can pay bill by using online payment method or cash on delivery method

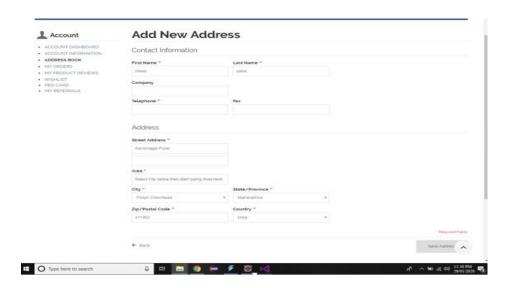

### 5. Update Profile:

- Here, customer can update his profile
- Customer can edit his personal information
- Customer can add his new address

# **4.3 Program Specifications**

# 1. Login Module

<b>Module Name</b>	Authentication and Authorization	
Program Name	Login	
Purpose	Check authentication of user	
Event	Click on "Login" Button	
Input	Constraints	Description
Login Detail	The required field Should not be null	Login details gets checked against database
Output	Login details are checked against database to check the authentication of the user and user get direction to their respective page	

# 2. Add Dealer

<b>Module Name</b>	Add Dealer	
Program Name	Add Dealer	
Purpose	Add Dealer details	
Event	Click on "Submit" Button	
Input	Constraints	Description
Login Detail	The required field	Customer details are
	Should not be null	Stored
Output	Dealer details are stored in the Dealer table and Admin gets acknowledgement message of record added	

# **DRAWBACKS & LIMITATIONS**

- This system is not supported for multicurrency.
- This system is available in limited area.
- This system is not supported for Multilanguage's.
- Product view in not in video format.

# PROPOSED ENHANCEMENTS

- Develop module for multicurrency.
- Adding new delivery location.
- Adding module for Multilanguage support.
- Adding product comparison.
- Adding product view in video format

### **CONCLUSION**

From the consideration of all the above points we conclude that This **Annapurna Integrated System** Application is developed for online shopping purpose. This website is useful for customer, Dealer and employee. Customer is able to register and login into system. Customer is able to purchase product from this website he have a facility to pay amount online. Customer can create his shopping cart and manage his cart. Customer can also post his complaints on to the portal. Customer also facilities like wish list management, view order detail, order tracking, view shopping history, etc. In this website Dealer is able to add his product on shopping portal. Also able to view order details of customers. Dealer can select and purchase the package for adding product on website. Package contains number of items added on portal and validity of package. Dealer can view his account balance at any time. He can also able to track customer order and manage discount offers. Admin is able to view and control other user of the system. He is able to add new category on website. Also he/she able to remove, blocks any user. He is able to manage package and security question on the portal. Also he can add new location or area in to the system.

Employee on this portal is useful for providing support to customer for his order status and any other purpose. He can solve the query posted by customer. Also able to view orders and feedback of customer.
