## **1.1 Company Profile**

KC motors has been in business since 1980's. Initially it only dealt with 2 wheelers but after wards started dealing in four wheelers as well.

Later it also started servicing of vehicles for its upkeep. Now it has a showroom in Pune city catering to its customers and providing satisfying care.

This showroom sells top end luxurious cars and bikes and provides servicing for them too. With ever growing demand and more than ten thousand satisfied customer this showroom keeps on expanding,

## **1.2 Existing System**

Currently there are manual efforts being undertaken at the car and bike showroom where employees have to attend to the user's queries regarding car purchasing and servicing and there is a need to provide complete car and bike related information online.

Customer has to visit showroom to know all the details about car servicing or bike servicing or registered customers have to call and then take an appointment for availing servicing for their respective vehicle.

A lot of time is wasted and there can be duplication of records owing to current manual system.

#### **Need for System**

- This online system/website for a car showroom will be time saving for people who want to buy new car or bike and while want to save time visiting showroom.
- Online system will make it possible for customers and showroom staff (PR team, servicing team, etc) to interact with each other.
- Due to large amount of data, management of data is necessary and hence centrally located data is needed.
- 4. To give detailed information about the cars and bikes available at the showroom for sale.
- Online system will make it easily possible for admin to track orders for new vehicles.
- 6. Online system will enable registered users to keep track of servicing history of their vehicle and book servicing appointment through the web-application.

## 1.3 Scope of Work -

#### **Customer/User**:

1)User can see all the detailed information about cars and bikes available for sale which includes

- a) Technical Specification
- b) Characteristic features
- c) Price
- d) Average/mileage

2)Customer can also see the available finance options like

Loan facility

3)Customers can get a quotation online about a car or bike that they are purchasing.

4) customer can apply for a test drive online for a particular bike or car so that person from showroom can show up at preferred location and time by the customer. 5) Registered customers i.e. users that already have purchased a car or bike from showroom can book their servicing appointment.

#### Administrator:

- 1. Administrator can add, update and delete any vehicle details.
- Administrator can see all the registered customers along with their details.
- 3. Admin can check test drive requests and assign staff for the same.
- 4. Admin can check loan facility requests and update their status.
- 5. Administrator can check servicing appointments/requests and assign them to respective Employees.

- 6. Various reports will be generated by the system like
  - a) Sold cars or bike report(daily).
  - b) Car or bike servicing appointments scheduled (date wise)
  - c) Vehicle test drive appointments (Date wise)
  - d) Employee report.

## Supervisor:

Supervisor will look into day to day activities such as servicing of activities and add data into system. Also, he will update status of servicing as and when they happen.

#### **Bank Representative:**

Checks pending loan requests and meets prospective customers. These requests are allocated to bank representative by the admin. On meeting a customer, bank representative will update the status

of that application.

# **1.4 Operating environment – Hardware and Software**

# Hardware specification

Processor	: Intel Dual Based System
Processor speed	: 1 GHz to 2 GHz
RAM	: 4 GB and above
Hard Disk	: 4 GB and above
Software specification	
Language	: PHP, HTML, CSS, Bootstrap
Database	: MYSql
Operating System	: Windows 7/8/10

#### 2.1 Proposed System:

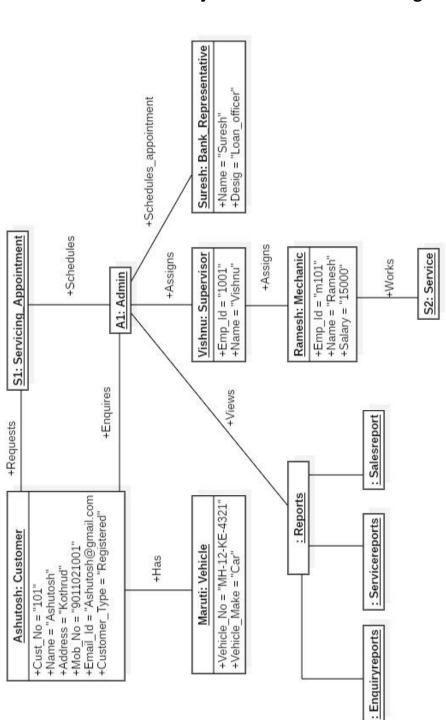

- The proposed system is interactive and user friendly and satisfies the user's needs regarding car details and servicing.
- 2) The proposed system is an internet-based system/web-based system.
- 3) There are four types of users in this online system:
  - a) Customer/User
  - b) Administrator
  - c) Supervisor
  - d) Bank representative
- Using this system, it will be possible for the user to book a vehicle.
- 5) User will be able to track and book servicing appointments.
- Showroom will be able to provide help in arranging loans for buying new vehicles.
- Showroom will be able to keep its customers and visitors updated about upcoming cars/bikes.
- Showroom will be able to manage test drives better through online test drive appointments.

## 2.2 Objectives of the system:

- The main objective of online system is to reduce time and cost required to visit the showroom, provide 24-hour service and satisfaction to reach out to customers.
- To keep proper track of customers who have bought vehicles from the showroom and provide proper servicing facilities to them online.
- 3) To generate various reports like vehicle wise report, price wise report, purchased vehicle reports, reports regarding servicing and other reports related to management of showroom and providing facilities to its customers.

#### **2.3User requirements**

- The users of this site include administrator, customer, supervisor and bank representative. Administrator and users will be provided with user name and password.
- 2) Administrator manages the data that is displayed on the site.
- Prospective customers visit the site and get a detailed description of vehicle they want to purchase.
- Supervisor changes the status of vehicle serviced and sends the updated status to administrator.
- Administrator keeps track of status of servicing of a vehicle, how many inquires showroom received etc.

## **3.10 Module specification**

#### **Module Description**

This system developed for people want to buy various vehicles or know about them, in general. Also, they can book test drive and servicing appointments by just visiting this system.

This system will have 3 modules.

- 1. Customer Customer has various modules like
  - Login In this module customer has to login in the system for buying a specific vehicle of their choice. They can enter their login id and password for a successful login.
  - Registration- In this module customer can register/signup in the system, by providing basic information like contact number etc.
  - Browsing customer can browse through various models of cars and bikes before selecting to buy it or booking a test drive appointment.

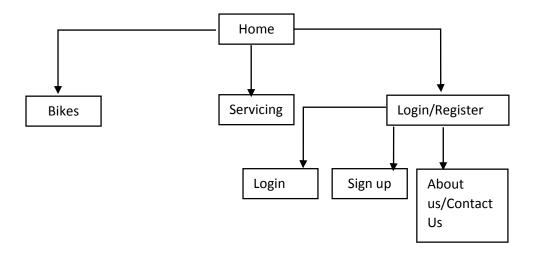

- iv. Booking servicing appointment customers
   can book servicing appointment of their
   choice and drop the car at that time.
- v. Booking test drive appointment Customers can book a test drive appointment of vehicle of their choice and visit the showroom according to their convenience.
- vi. Loan assistance Customers can book a appointment with a loan officer of a certain bank through this system for loan assistance.

#### 2. Admin – Admin will have access to following modules

- Login This module can only be accessed by login credentials. Which will give access to all the other modules.
- Reports In this module various reports are available for example customer report, servicing report employee report. Admin can go through them and do an analysis.

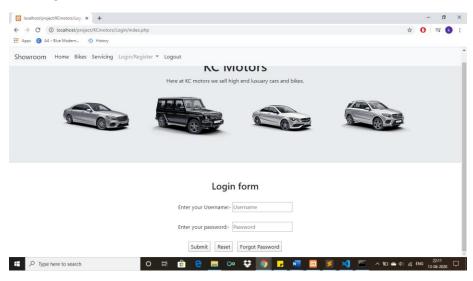

- iii. Employee addition- Employee data is added in this module with various fields like designation basic contact information.
- iv. Updating customer records- Here customer data may be updated in case a need arises.
- v. Updating sales record- Admin will have access to sales module in which he will update record of sales which took place.
- 3. Supervisor Supervisor will have access to modules like-
  - Job updating In this module supervisor will update what servicing is done on the vehicle and make a invoice for the same job.

#### 4.2 Operations manual –

A) There are 3 users of this system-

- Customer
- Admin
- Supervisor

B) The customer has the following function -

• Login-

In this function customer can enter his user name and password to enter into system and access all necessary functions.

• Register-

In this function customer can register himself on to the system and set his username and password.

• Browsing of vehicles-

In this function customer can view various models of cars/bikes.

• Loan assistance-

In this function customer can avail opportunity to opt for loan assistance and then admin will fix up an appointment with the loan assistance personal of the bank.

• Fixing servicing appointments-

In this customer schedules a servicing appointment with the showroom.

• Fixing up test drive appointment-

In this customer can book a test drive appointment with the showroom.

- C) The admin has following functions-
  - Adding vehicle details in the database-

It is used to maintain an inventory of vehicles present at a given time.

• Maintain details for employees-

In this function admin enters data of employees who are working in showroom.

• Keeping track of details of servicing and test drive appointments.

D) Functionalities of supervisor-

 Add job details and storing them –
 In this supervisor adds details of servicing jobs that are performed in showroom.

# 4.3 Program specifications

## **User Registration**

Module	User Registration	
Program Name	Sign up	
Purpose	Add user details	
Input	Constraints	
User details	The Required field	Description
	should not be null	Filling of required
		details.
Output	The User details	User details get
	are stored in the	stored
	registration table	
	and user gets the	
	acknowledgment	
	message of the	
	record added.	

## Vehicle Registration

Module	Vehicle Registration				
Program Name	Vehicle Registration	n			
Purpose	Add Vehicle Detail	s in the system.			
Input	Constraints				
Vehicle details	The Required field	Description			
	should not be null	Filling of required			
		details.			
Output	The Vehicle	Vehicle details get			
	details are stored	stored			
	in the vehicle table				
	and admin gets the				
	acknowledgment				
	message of the				
	record added.				

## **Booking Servicing appointment**

Module	Booking Servicing Appointment				
Program Name	Booking Servicing Appointment				
Purpose	Book servicing	appointments for			
	customer.				
Input	Constraints				
Customer Details	The Required field	Description			
	should not be null	Filling of required			
		details.			
Output	The appointment	Vehicle servicing			
	is booked and	appointment			
	customer gets the	details get stored			
	acknowledgment				
	message of the				
	servicing				
	appointment				
	booked.				

# Test-drive appointment

Module	Test-drive appointment				
Program Name	Test-drive appointment				
Purpose	Book test drive	appointments for			
	customer and store	their details.			
Input	Constraints				
Customer details	The Required field	Description			
	should not be null	Filling of required			
		details.			
Output	The details about	Test Drive			
	customer are	appointment			
	stored in test-drive	details get stored			
	table and user gets				
	the mail of the				
	appointment				
	booked.				

## **Drawbacks and Limitations**

We have tried our best to integrate the system the system should be reviewed from negative angle to. So that it has some limitation and drawbacks

1)We cannot compare between two vehicles

2)Also, there is no review module for example people can write their experiences about a particular vehicle which can lead for better user interface.

3)There is no payment gateway as such which can be used for paying purposes.

4)This site only targets customers located in Pune area.

## **Proposed Enhancements**

- 1. Addition of payment gateway.
- 2. Addition of review feature in which users can comment about their views about a car/bike.
- Advertisement section for small time vendors selling various accessories for example seat covers, stereo systems etc.
- Comparison of vehicle for enhancing decision making abilities of customers.
- 5. Extending for customers across India.

## Conclusions

This project provided me the chance of working with technologies like php, CSS and HTML.

The development of any business application is part of our MCA curriculum. The project was expected to complete using **System Development Life Cycle (SDLC)** approach. The actual implementation of these aspects gave exposure to the problem in real life situations involved in project development and how to handle them in an efficient manner.

This application enables customers to browse various vehicles and book test-drive appointments for them. Also, customers can book their servicing appointments on their choice of date.

All the features in this application are developed as per customer specifications and as per they are specified in the documentation, thus satisfying all the requirements given by the agency.

## **Bibliography**
